BLOCKCHAIN AGENCY

About us

A team of blockchain specialists and Web3 enthusiasts, working in a narrow segment of blockchain development. Whether you have a startup or a working business in the cryptocurrency market, we are ready to develop a turnkey project or become a technical department for your product. Extensive work experience and a high level of understanding the specifics of decentralized apps and the Internet of the future.

Our services and tools

A list of services for startups and proven business models of the blockchain market.

Smart contracts

We will select the optimal blockchain and develop a reliable and secure smart contract. We will audit the smart contract that has already been developed.

NFT marketplaces

Organization of NFT trading in your marketplace in any available blockchain network with a UI friendly for the buyer and seller.

Blockchain games

Blockchain games in the gambling industry or with Play to Earn mechanics and NFT collections.

DeFi platforms and protocols

Secure trading on decentralized platforms, best solutions from the proven DEX protocols Uniswap, PankaceSwap.

Cryptocurrency exchanges and exchangers

Reliable solutions for custodial services for trading and safe storage of cryptocurrencies.

Investor's accounts

Functional personal accounts with the connection of various payment systems and cryptocurrencies, for the initial sale of tokens and other investment programs.

P2P platforms and cryptoprocessing

Organization of cryptocurrency trading between your users, functional solutions for P2P trading business.

IDO platforms

IDO project catalogs, organization of presale and distribution of tokens between investors at early stages. OTC market for investors before unlock.

Cryptocurrency wallets

Secure and reliable storage of cryptocurrencies: web, desktop or mobile. Development of wallets for any blockchain network, custodial or non-custodial.

Our Projects

A small part of the projects developed for our customers with love

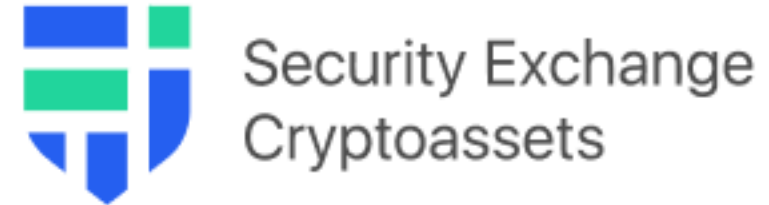

CryptoCubes

3 months • Solidity, Vue.js, Node.Js, Laravel, Tron

A game built on Tron smart contracts with the USDT game currency, a multi-player gambling game with server-side calculation of results. History of games, bets, deposits and withdrawals. Also multifunctional admin panel with the output of all statistics on profitability, commissions and balances. TronLink Wallet connection

<https://cryptocubes.net/>

SEC.Markets

5 months • Angular, PHP, Yii

Cryptocurrency exchange with a trading terminal,
referral program and payment of dividends.
Depositing and withdrawal of cryptocurrencies
(btc, eth, usdt) and fiat currencies (usd, euro).
Advanced admin panel features.

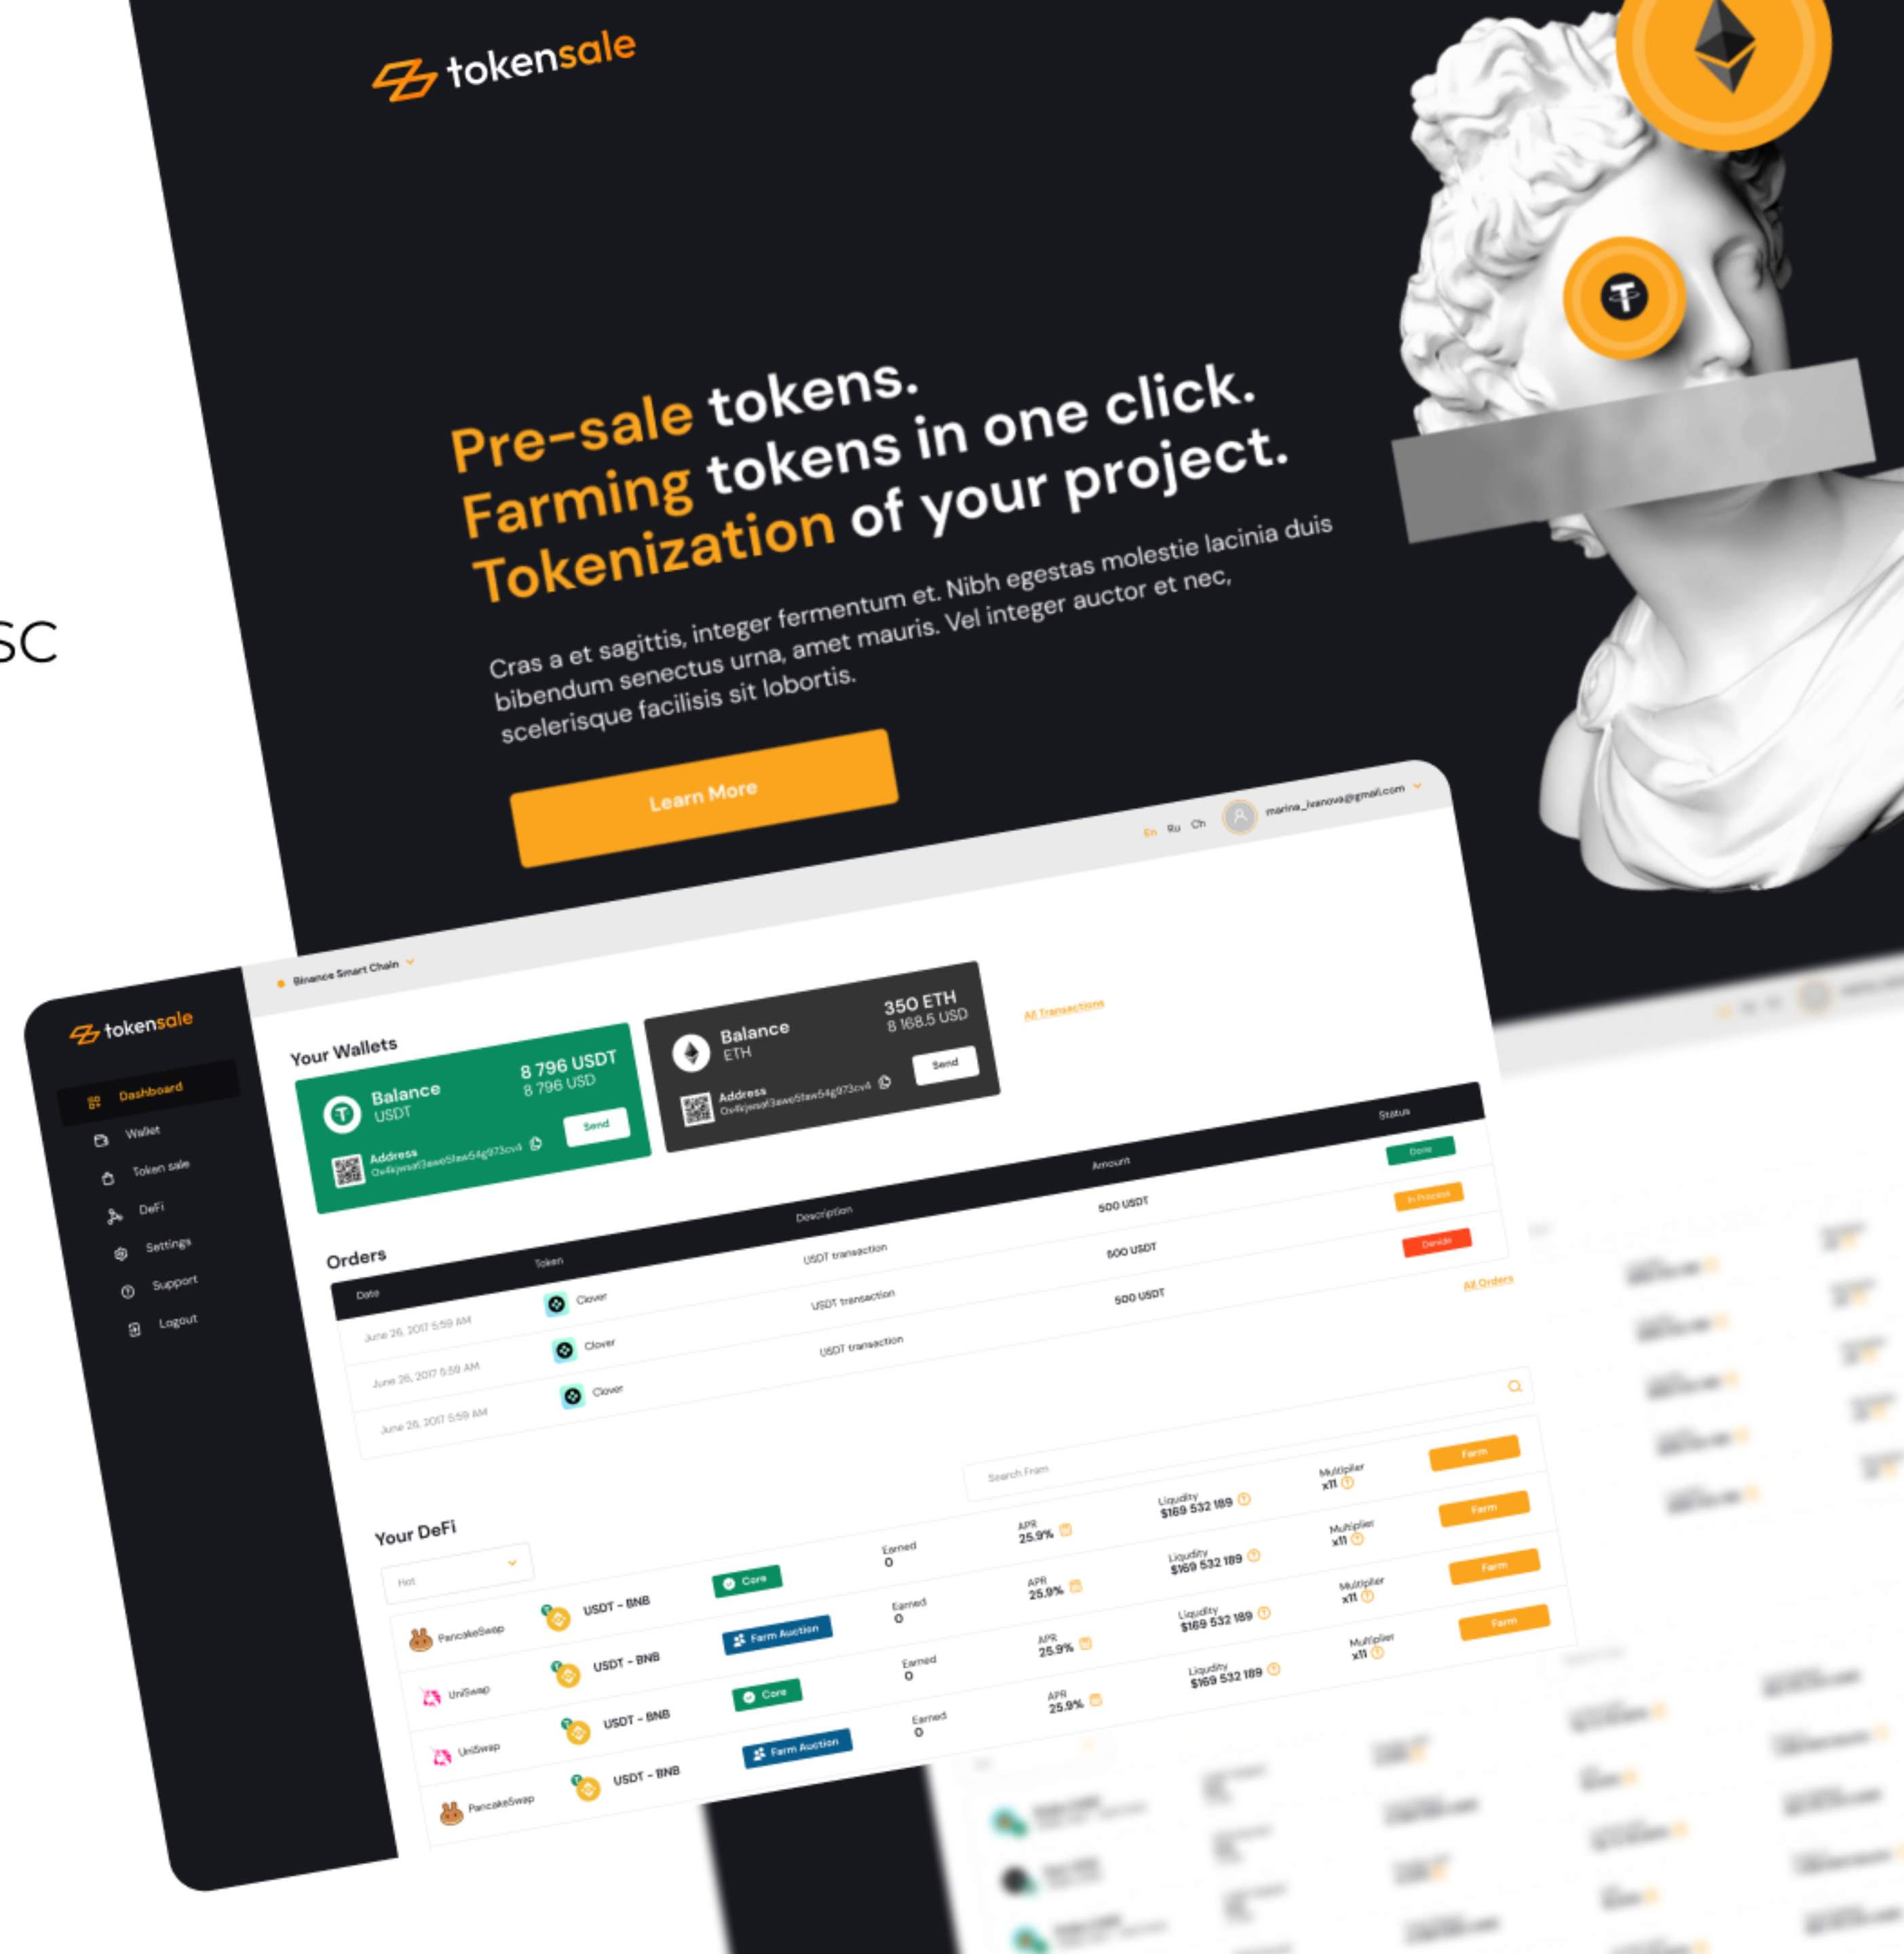

TokenSale

5 months • Node.Js, Laravel, Ethereum, BSC

Custodial web wallets, a platform for tokenizing projects and selling tokens, working with the PancakeSwap and Uniswap DeFi protocols, a personal account featuring investments in DeFi products, liquidity pools, farming, staking. Advanced admin panel features.

<https://tokensale.in/>

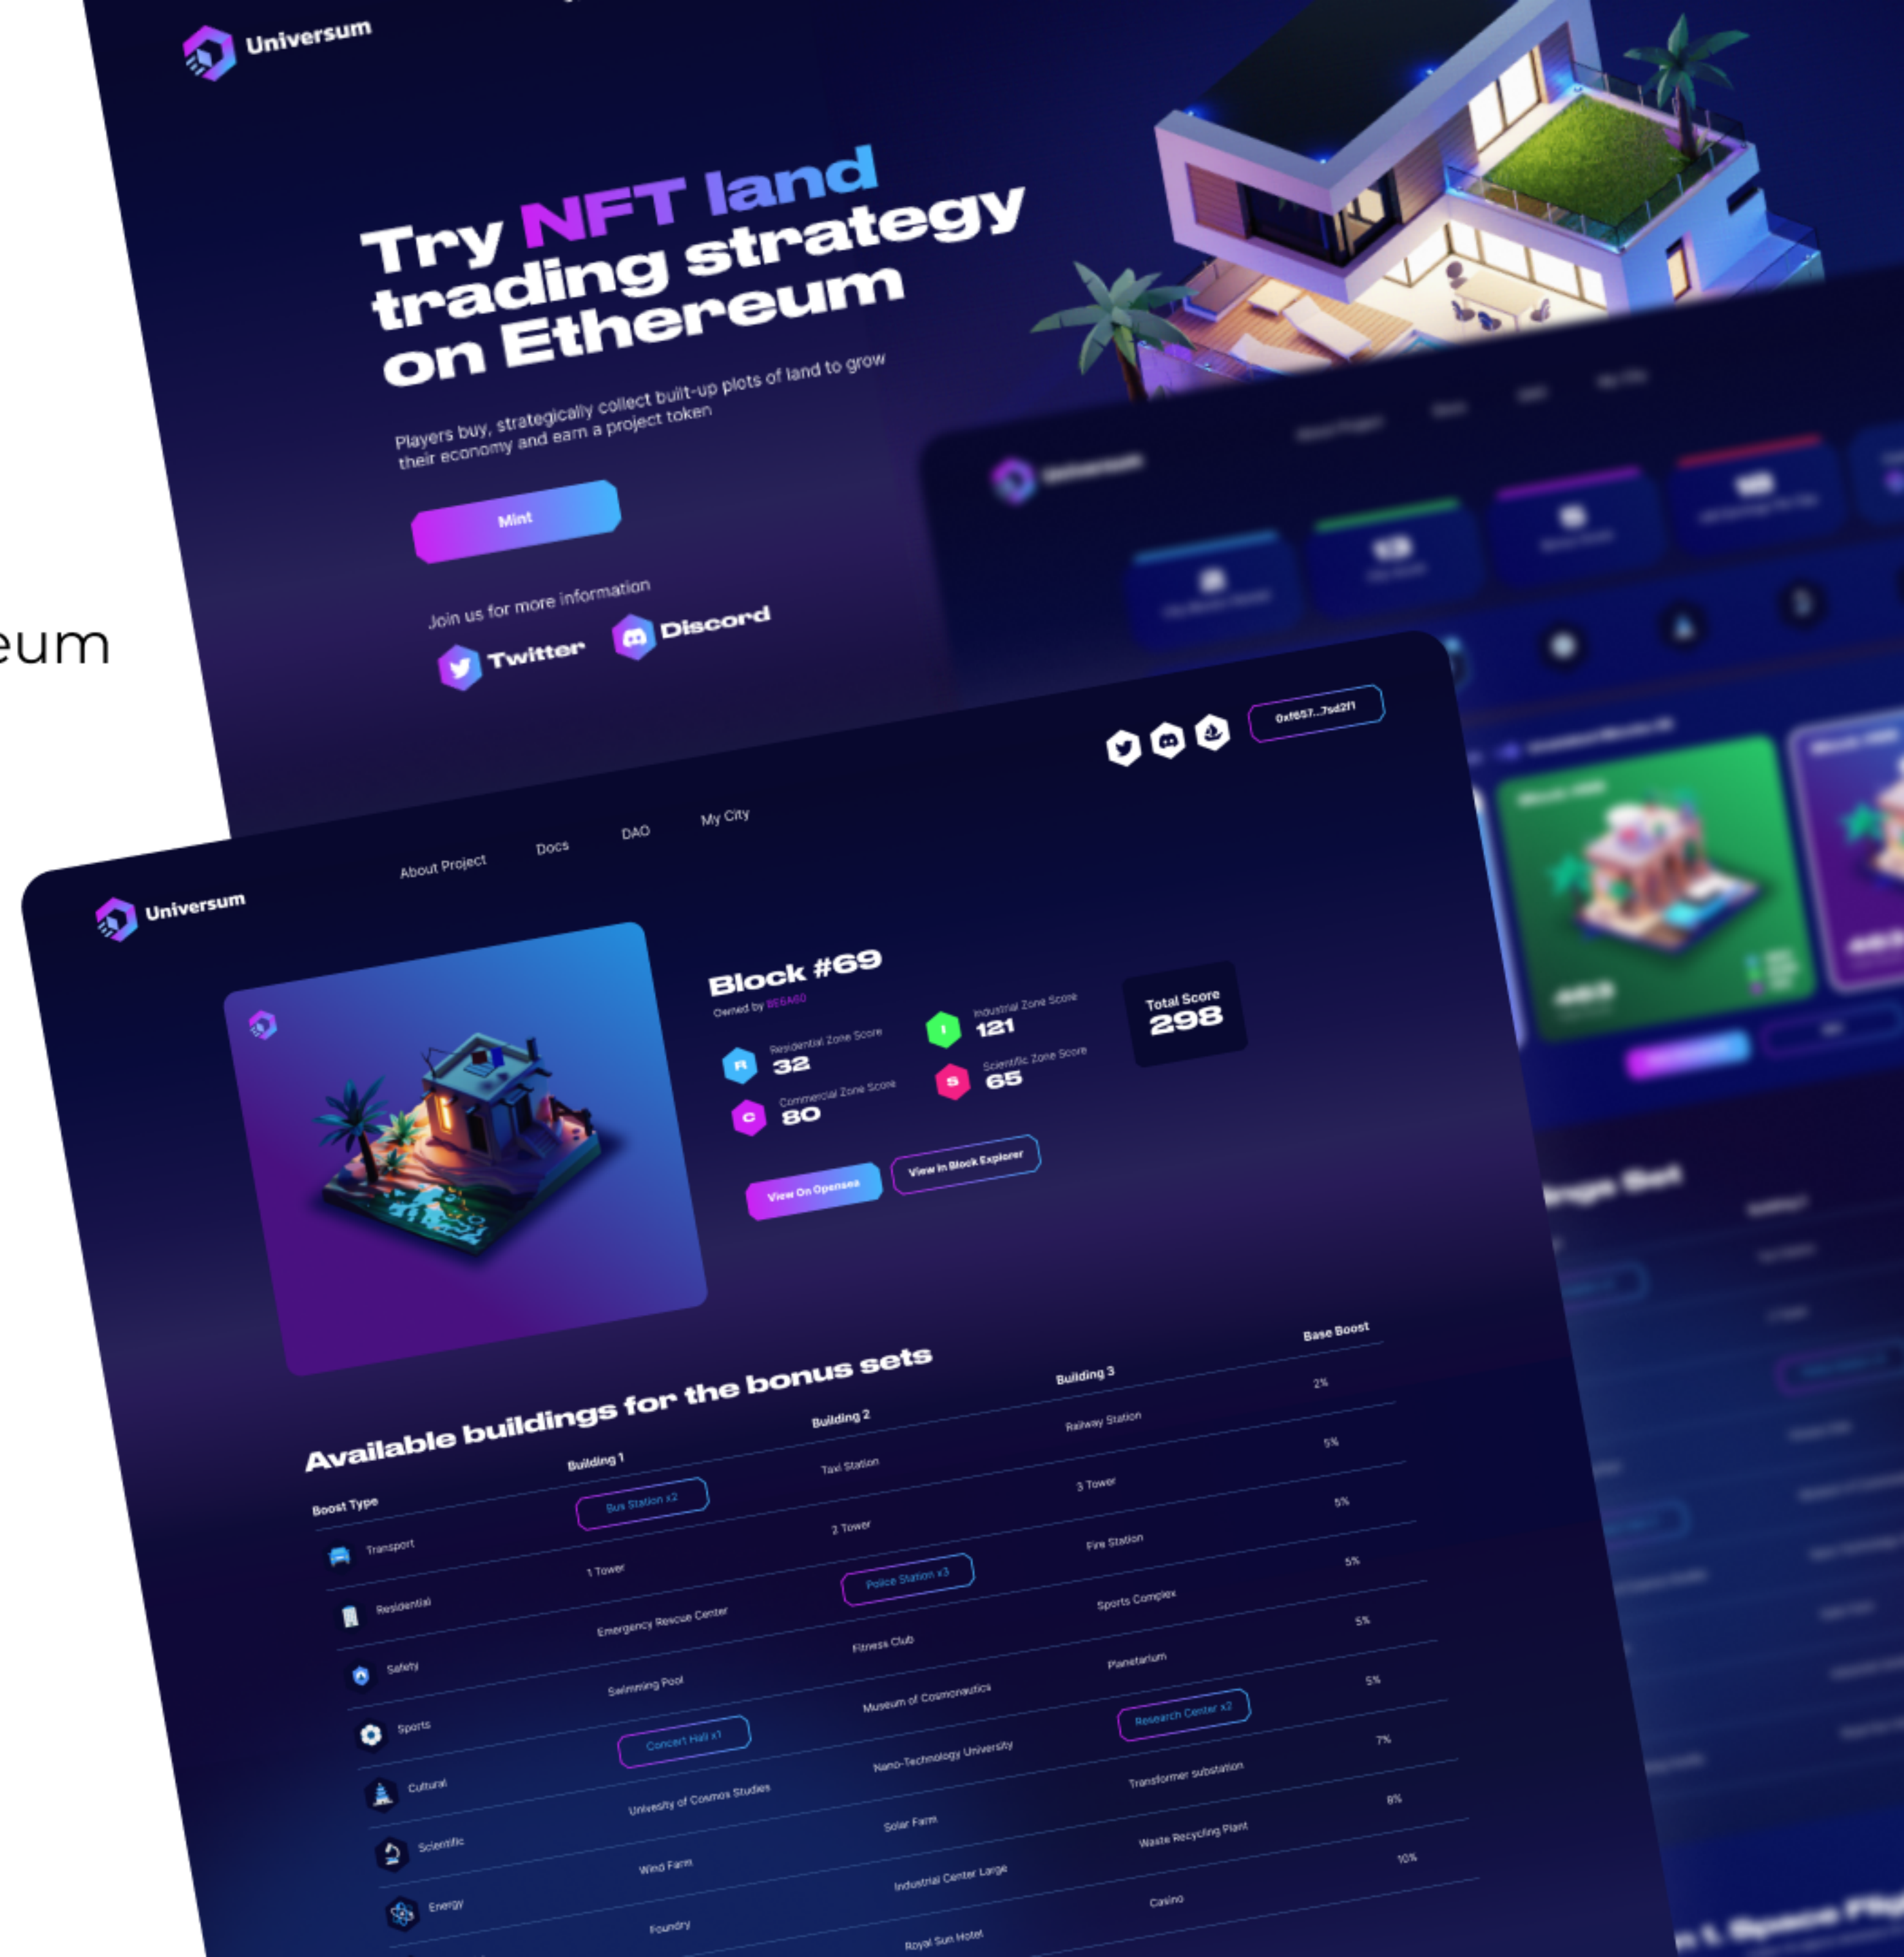

Universum

4 months • Solidity, React, Node.Js, Ethereum

A game built on the basis of an NFT collection on Ethereum with complex Game-Fi mechanics: you must collect sections of the city with certain buildings to complete the mission. The DAO functionality and admin panel, as well as software for generating video plots and metadata.

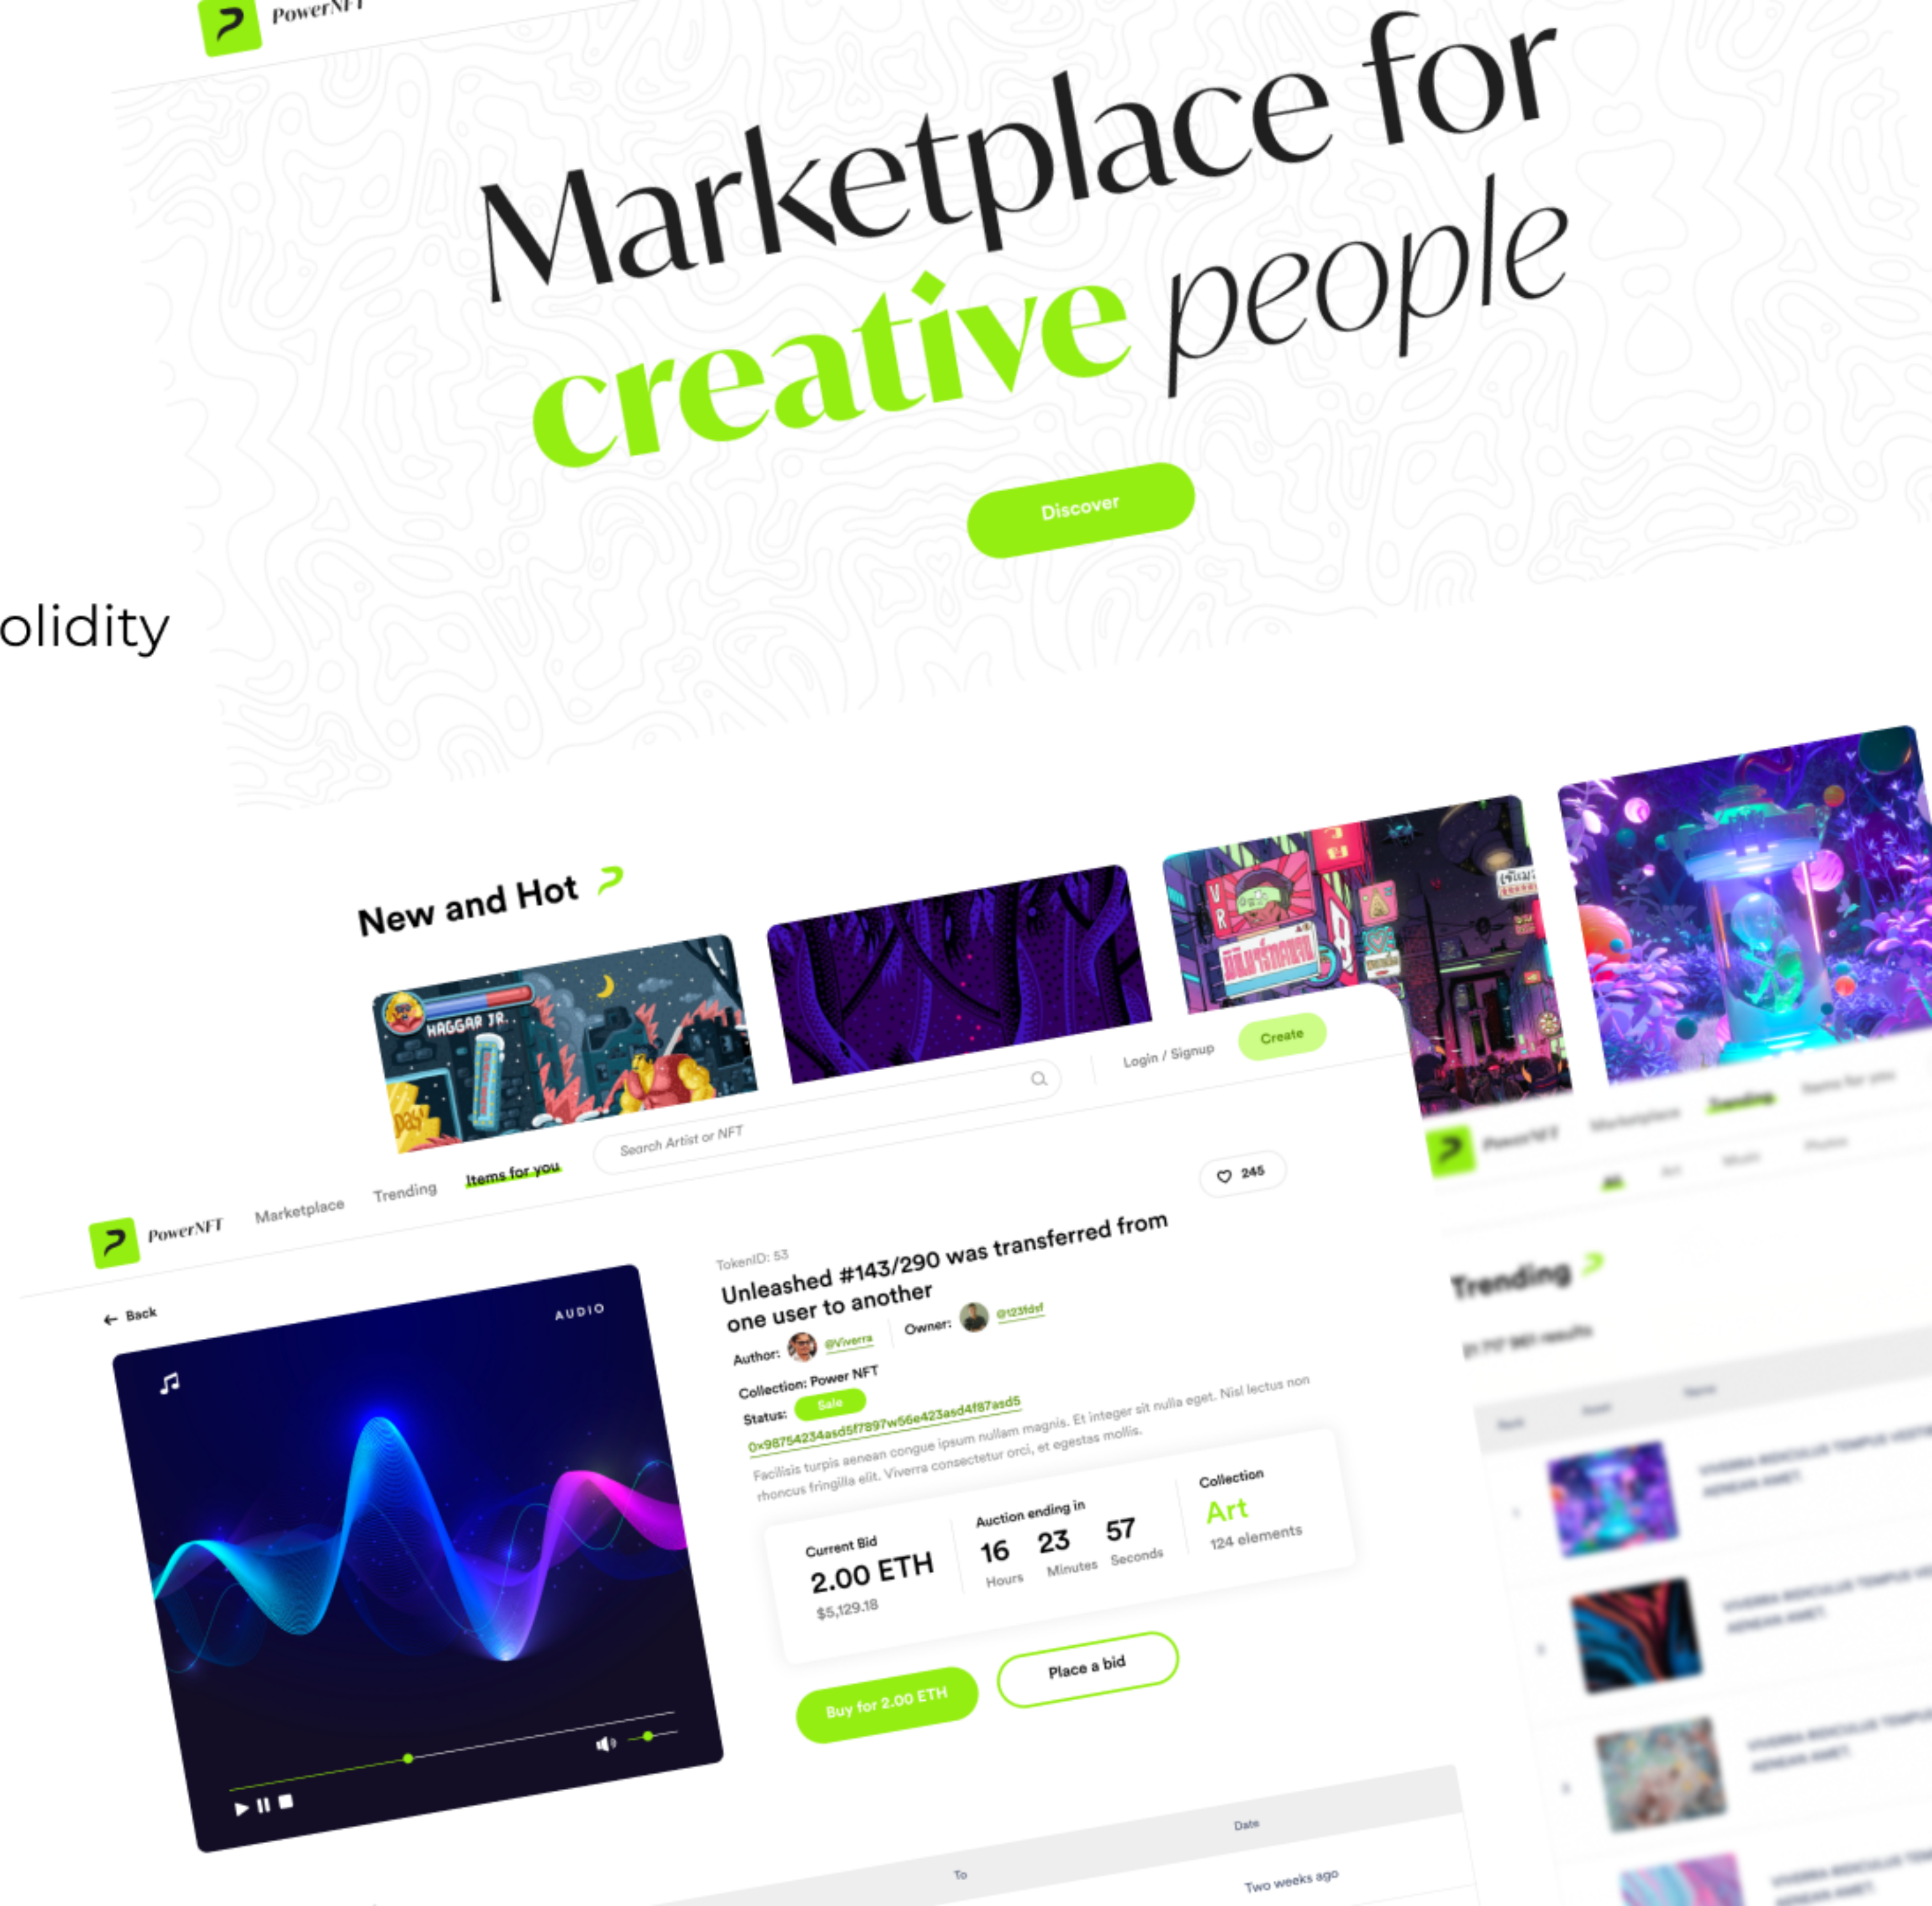

NFTPower

4 months • Laravel, Vue.js, Ethereum, Solidity

NFT is a marketplace with an auction system, NFT mining, a personal account, an internal balance of fiat payment systems and billing, ratings, filters. Ethereum blockchain-based smart contracts.

SAWA Launchpad

4 months • Laravel, React, Node.js, Binance Smart Chain, Ethereum, Polygon, Solana

IDO launchpad, marketplace, staking, farming, articles and referral program. A platform for the sale of allocations with its own token and ref. program. For 4 blockchains at once. Connecting oracles and Chainlink autorun keepers with complex smart distribution contracts.

<https://sawastarter.com>

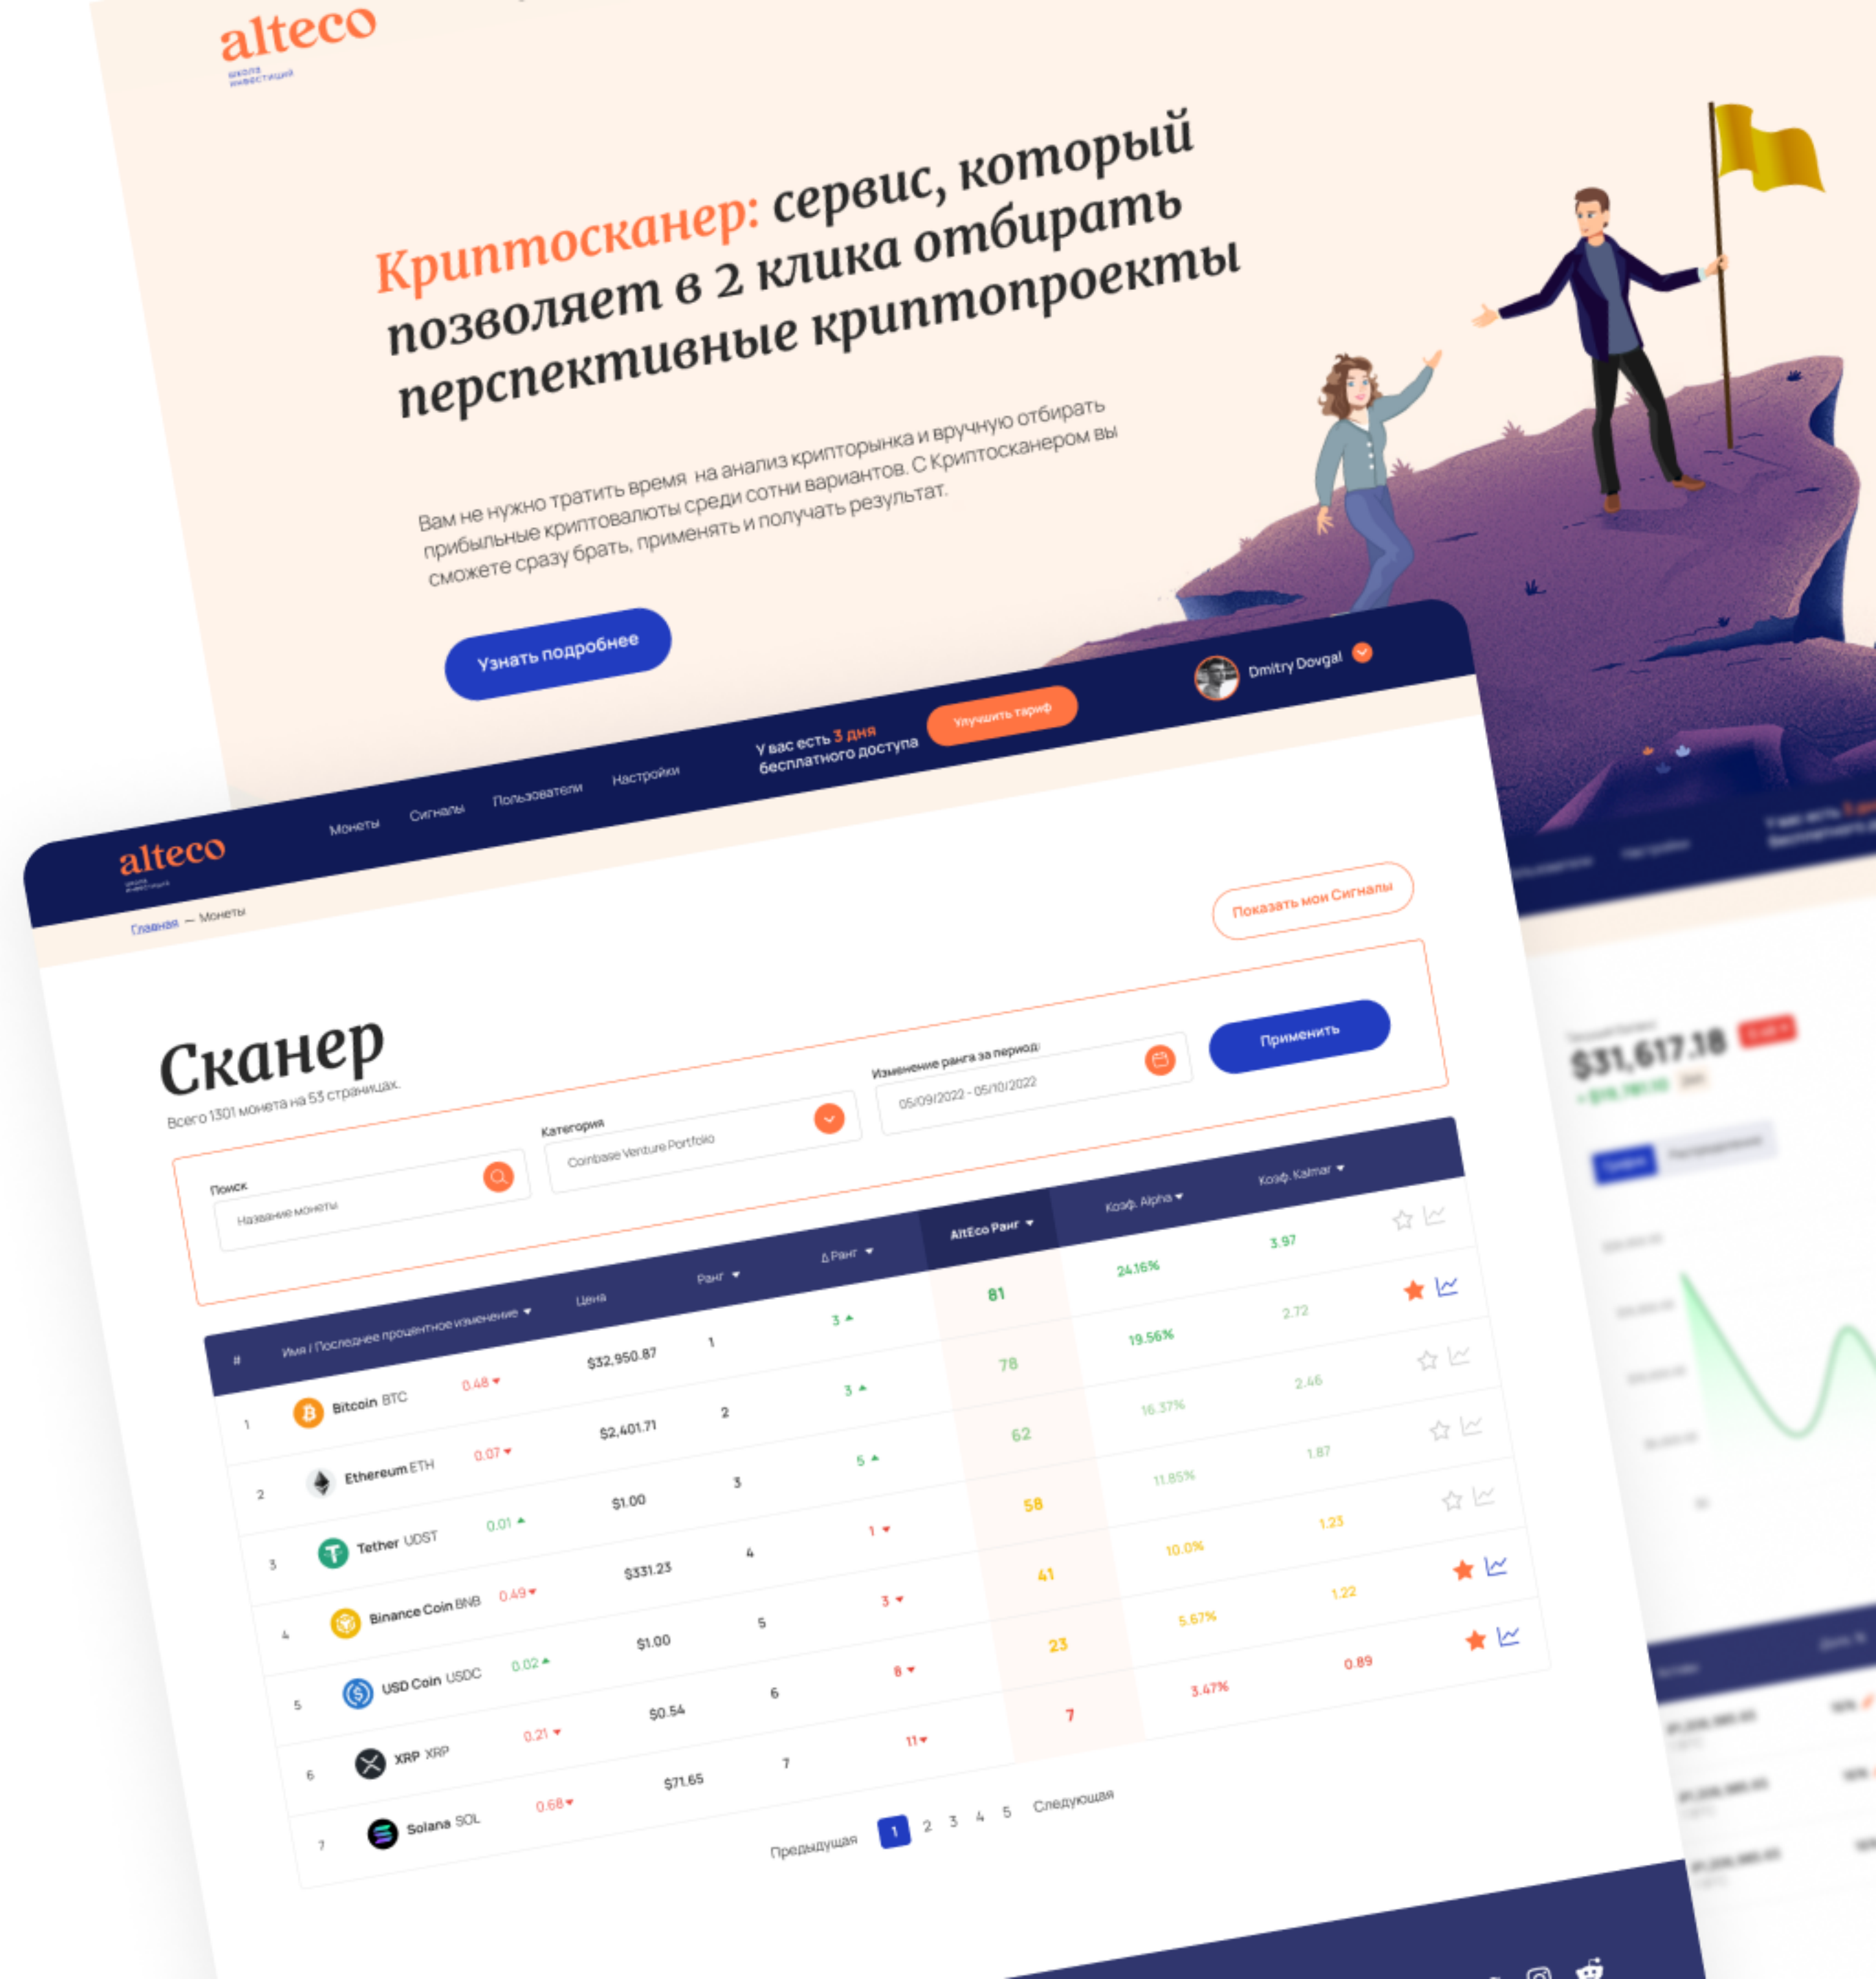

Alteco CryptoScanner

2 months • Laravel, JavaScript

A service for subscribing and creating your own trading signals for traders based on CoinMarketCap API data, integration with the client's user base. Displaying detailed statistics for each cryptocurrency. Strategies for trading, paid subscriptions for users.

<https://altecocryptoskaner.ru/coins>

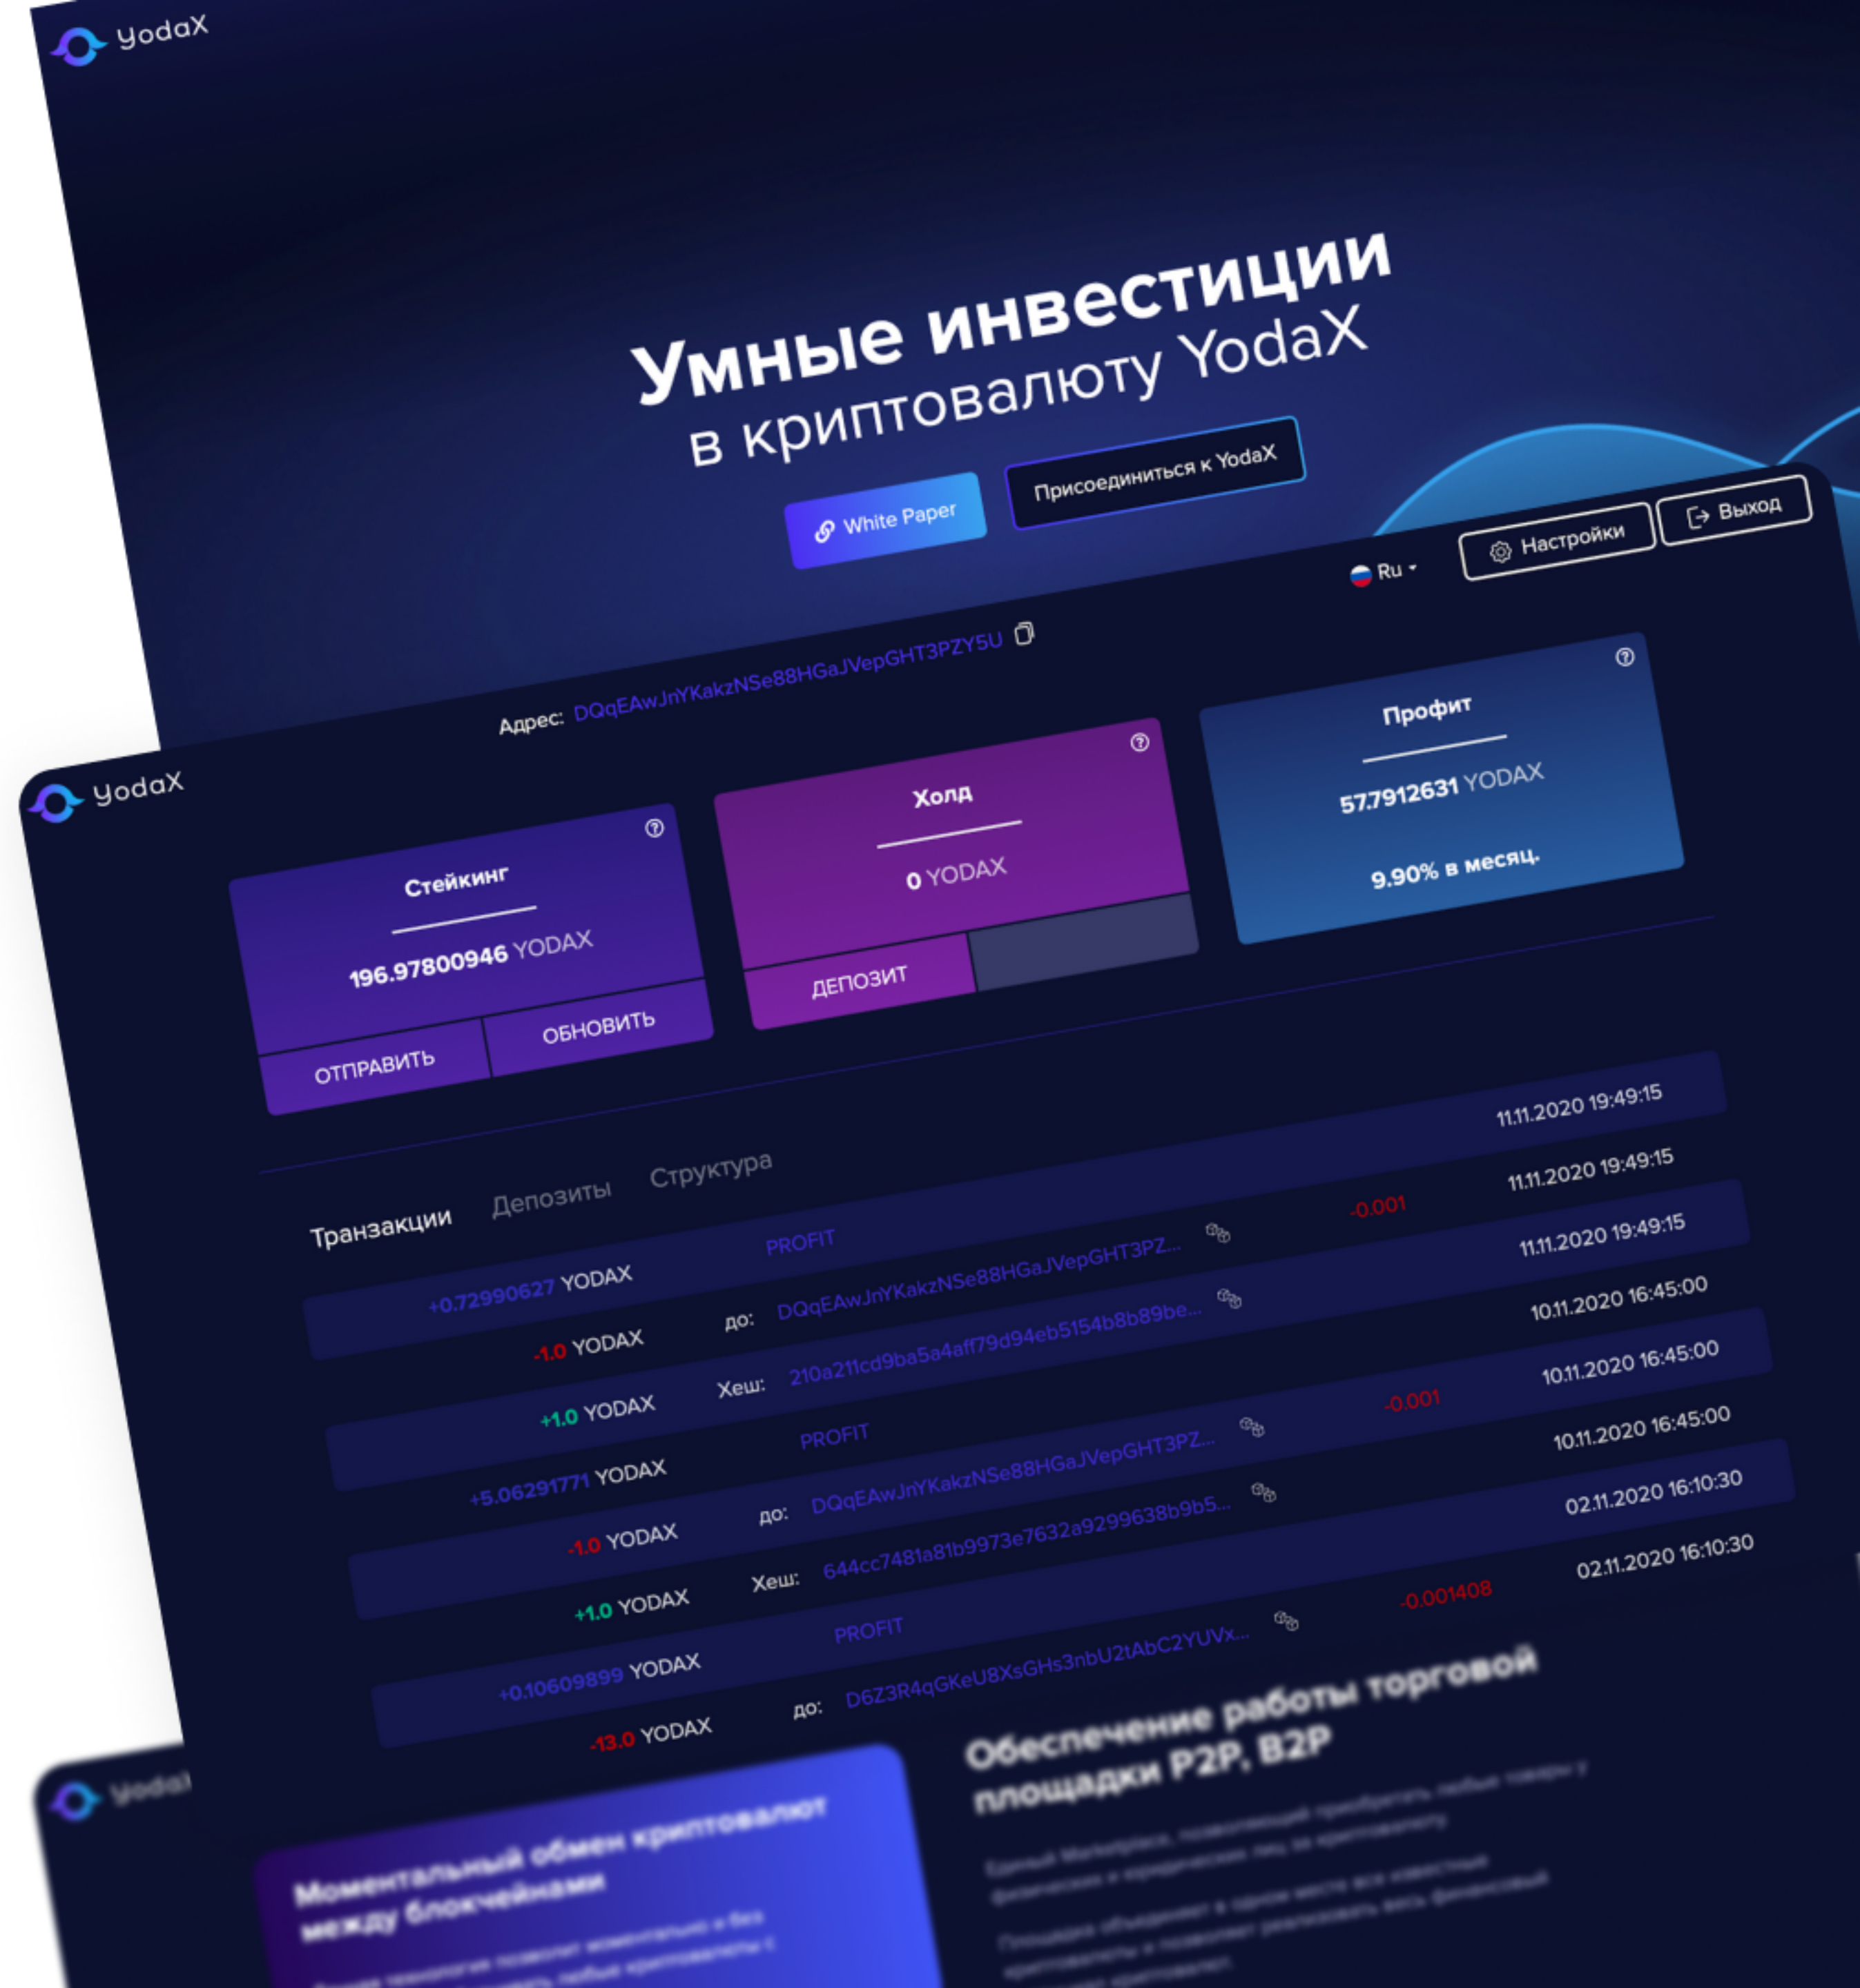

Yoda

3 months • Laravel, C++, Bitcoin

Development of a POS cryptocurrency with low transaction costs and staking. In addition to the cryptocurrency itself, it includes the development of a web wallet, a desktop wallet and applications for iOS and Android, an investor's personal account and a referral program. The personal account structure includes elements of the following functionality: Web wallet, Balance management, Address generation, Initiation, Transactions, Processing of all blockchain transactions, Two-factor Google authorization, Two-factor Google transaction confirmation, Functionality for restoring the wallet access phrase, 12 words, Building a network structure on blockchain transactions.

MRM

2 months • Laravel, JavaScript, Riple

The rating of the Ripple blockchain-based projects, internal system of project credibility rating by a large number of parameters, filters, paid subscription to the helpline, invoicing in the customer's currency.

<https://mrmole.org/>

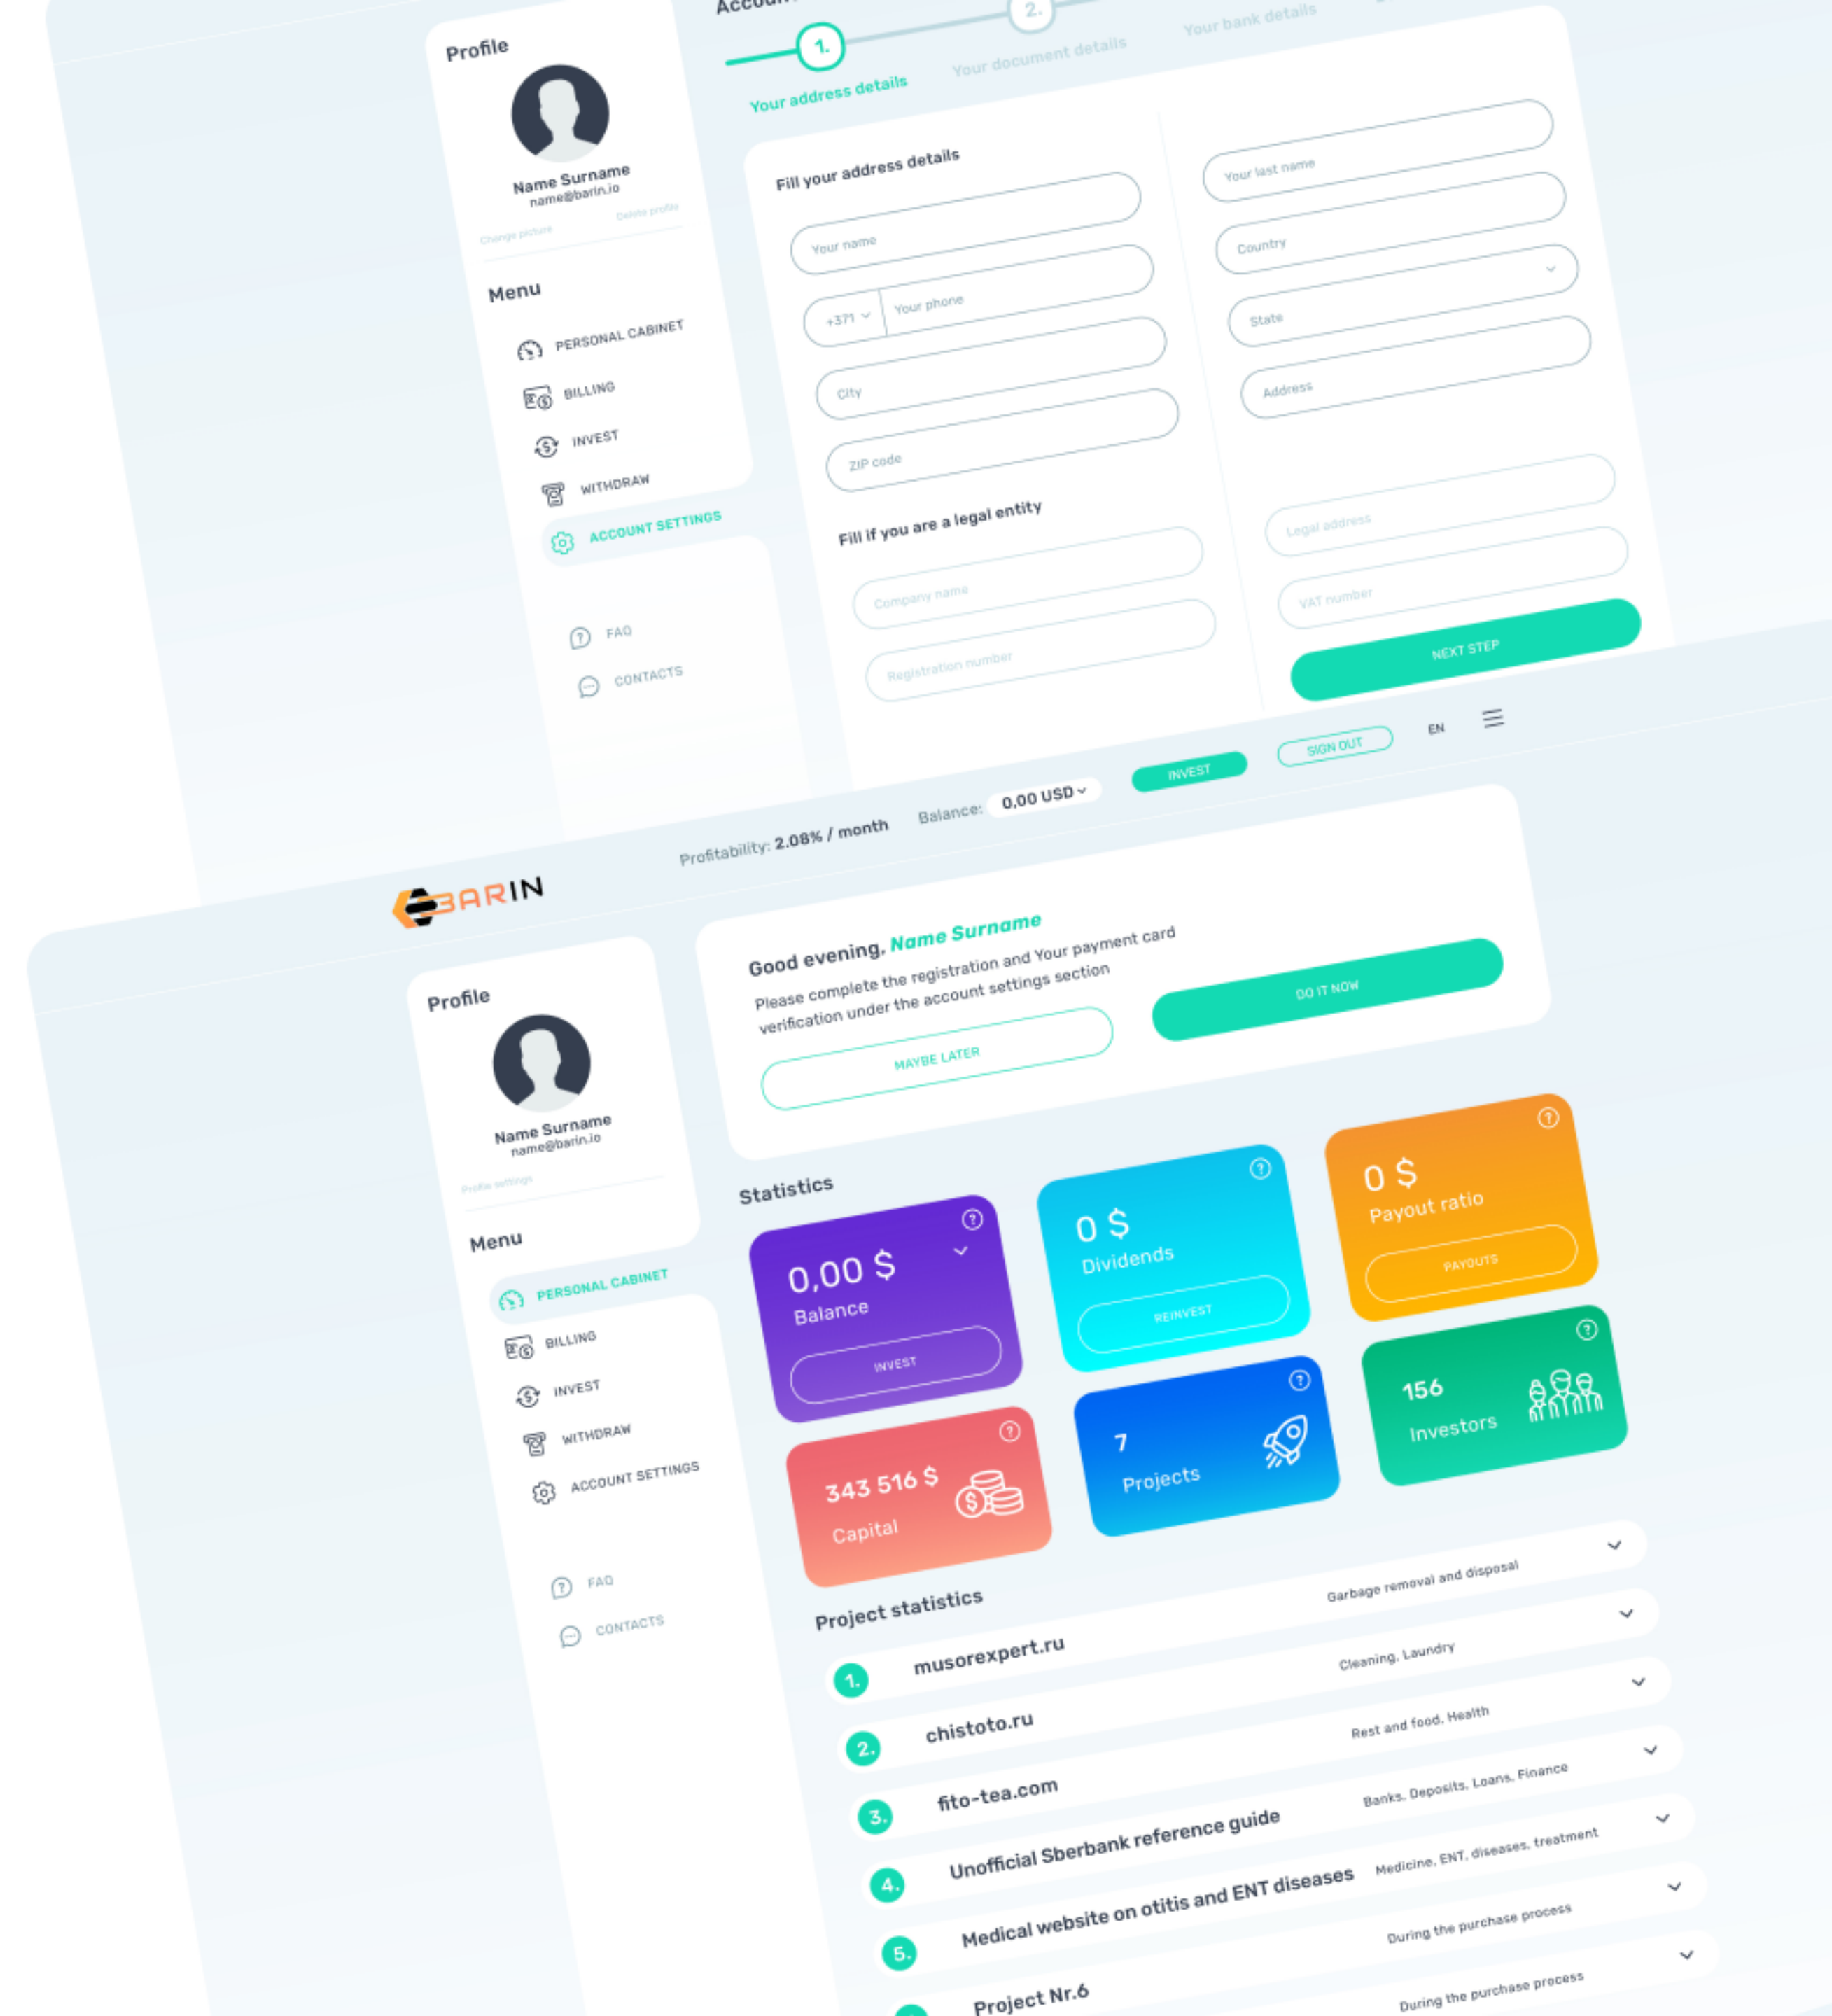

BARIN.IO

BARIN

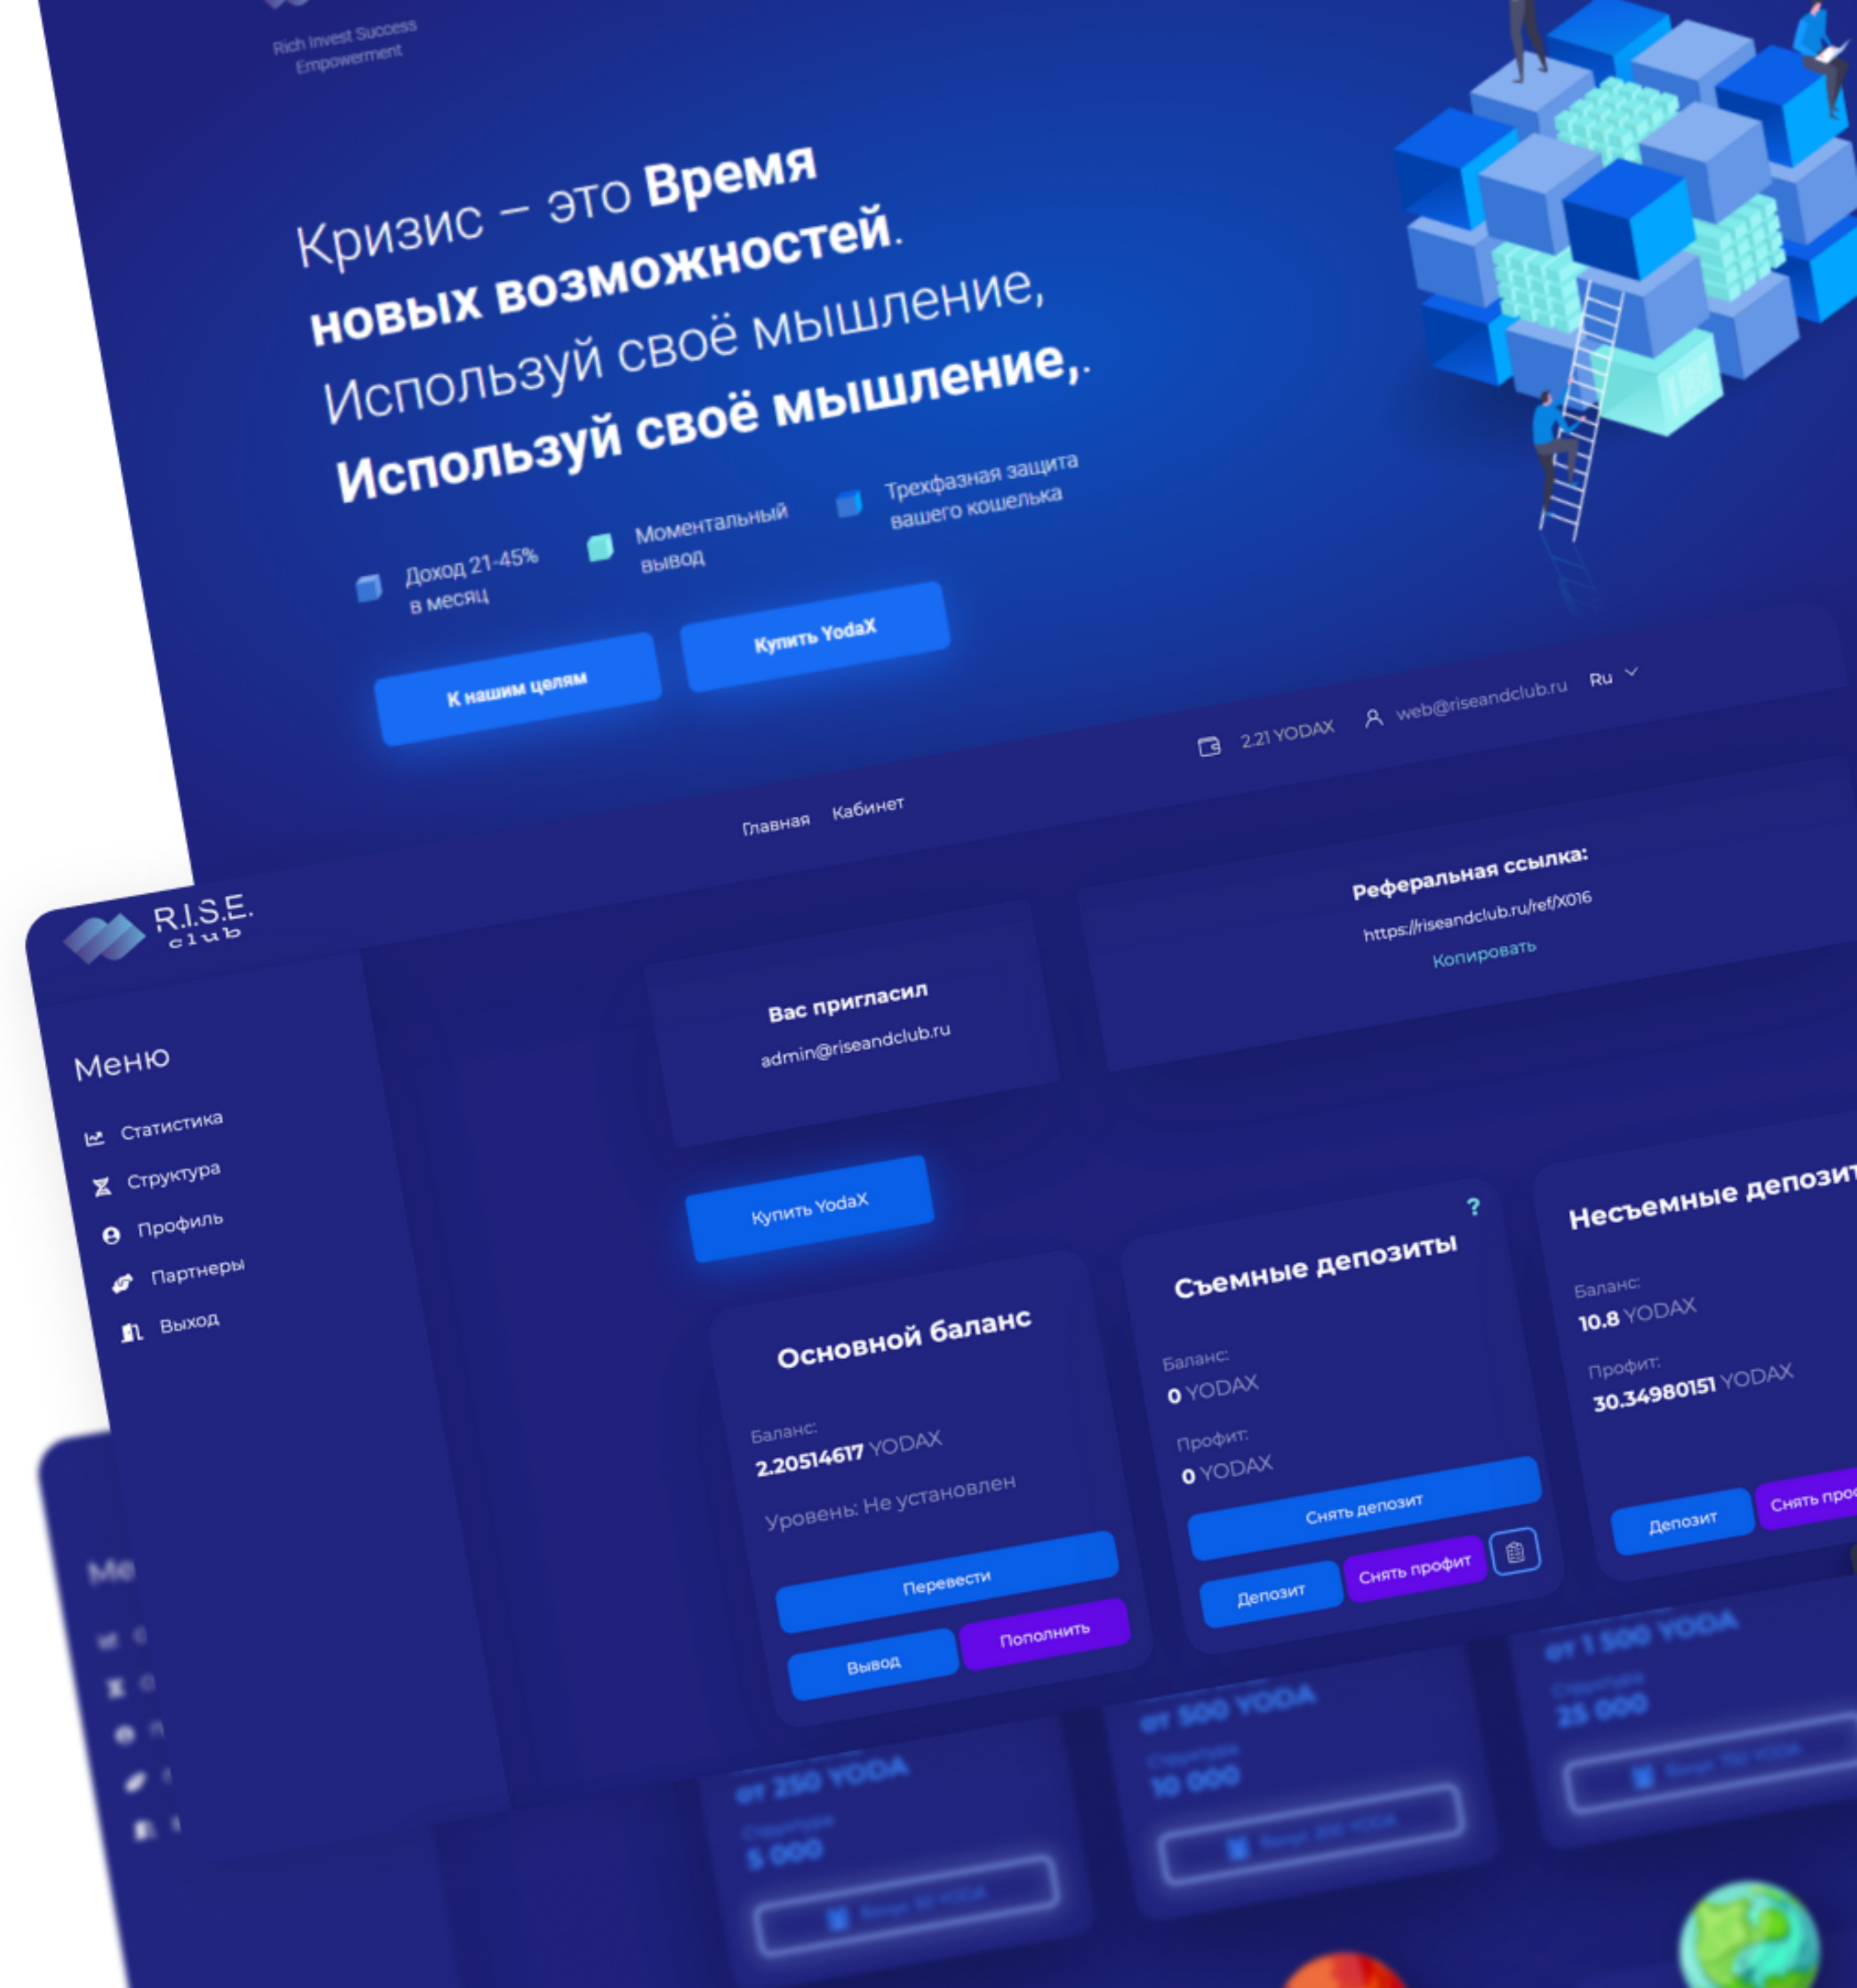

3 months • Laravel, Ethereum

An investment blockchain project that sells BIT tokens backed by Internet assets with monthly dividend payments. A smart contract has been developed for the BIT token, investor's personal account, a KYC system, adding and withdrawing investment projects with synchronization to the website statistics systems' APIs. As well as the dividend system, profile setup, generation of loan agreements and advanced admin panel features.

A project based on the Yoda-x blockchain, but with more complex staking algorithms and referral programs. A personal account has been developed for YODA cryptocurrency staking with a referral program.

XVX

4 months • Laravel, JavaScript

A personal account for the exchange of cryptocurrencies, the following blockchains are connected: Ethereum, Bitcoin, Tron with all the cryptocurrencies the client requires. Synchronization with centralized exchanges, client reserves and internal wallets.

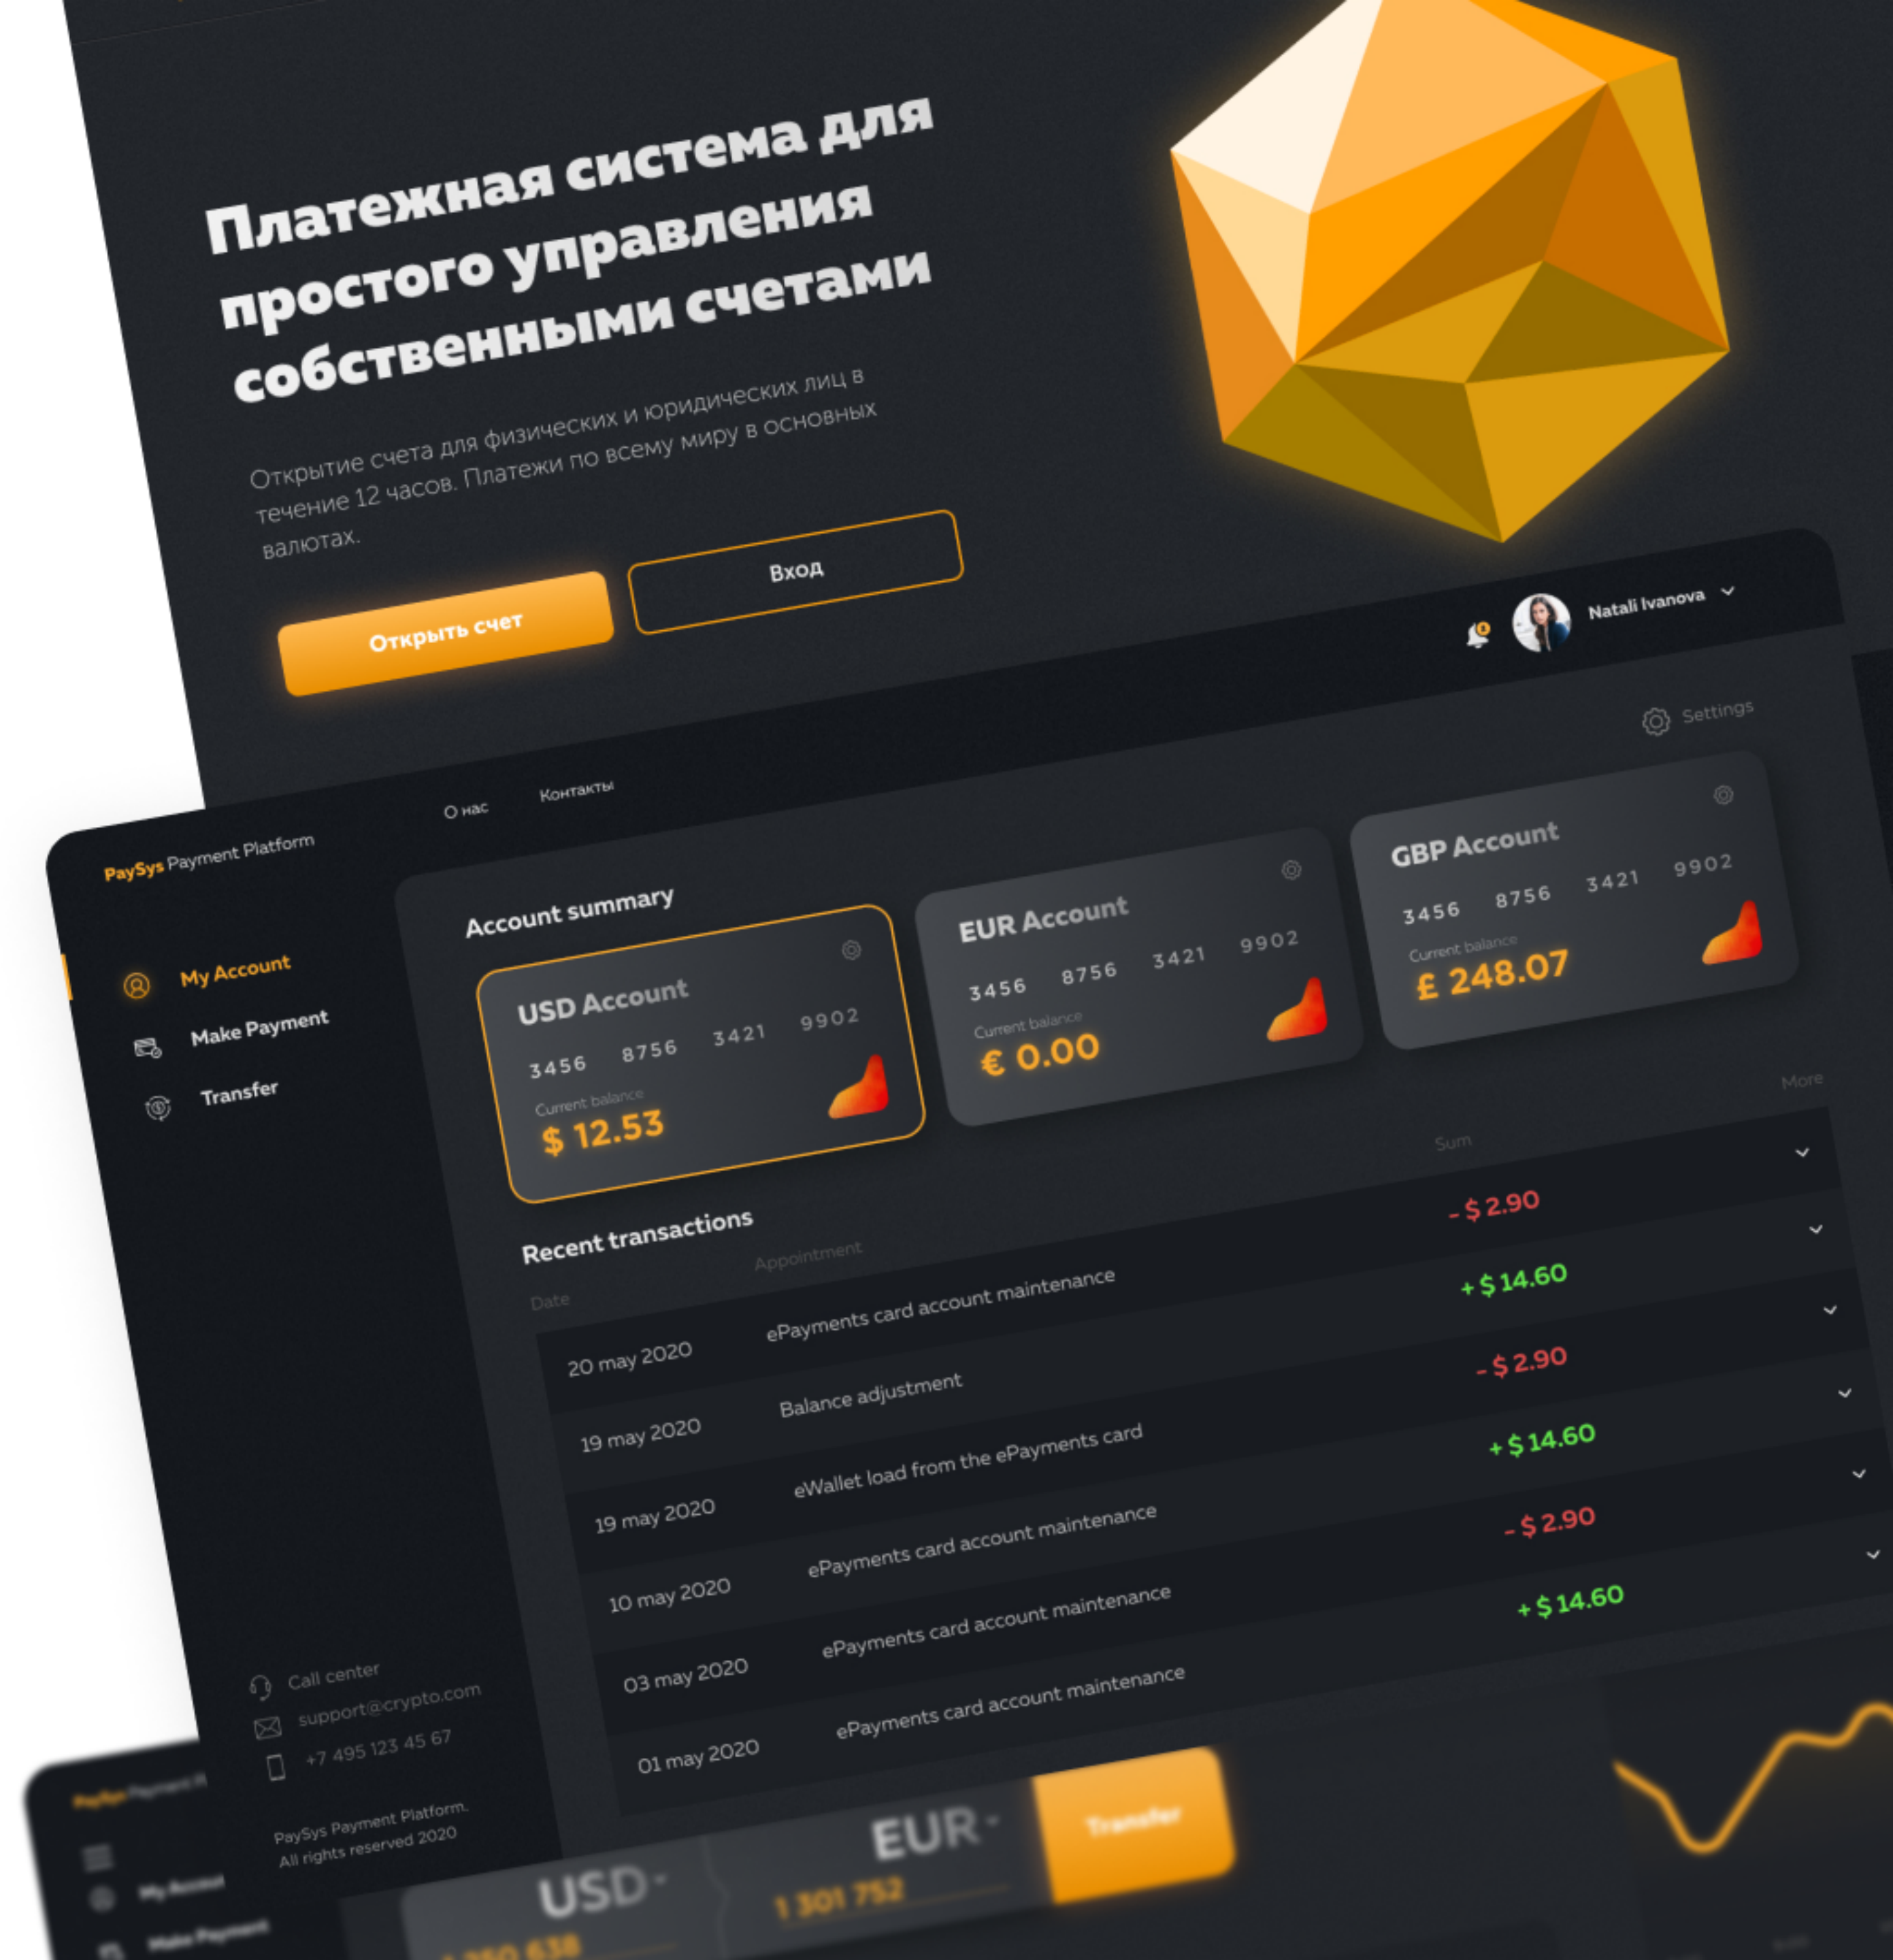

PaySys

2 months • Laravel, JavaScript

Personal account of the Paysys payment system. Includes management functions: personal data, accounts in 3 currencies (US dollar, Euro, British pound), receiving cash to your own accounts directly from any banks via SEPA and SWIFT, cash withdrawal to VISA, Mastercard, currency exchange, transaction history, status, support chat, multilingual version (English and Russian) with an extension to 16 languages.

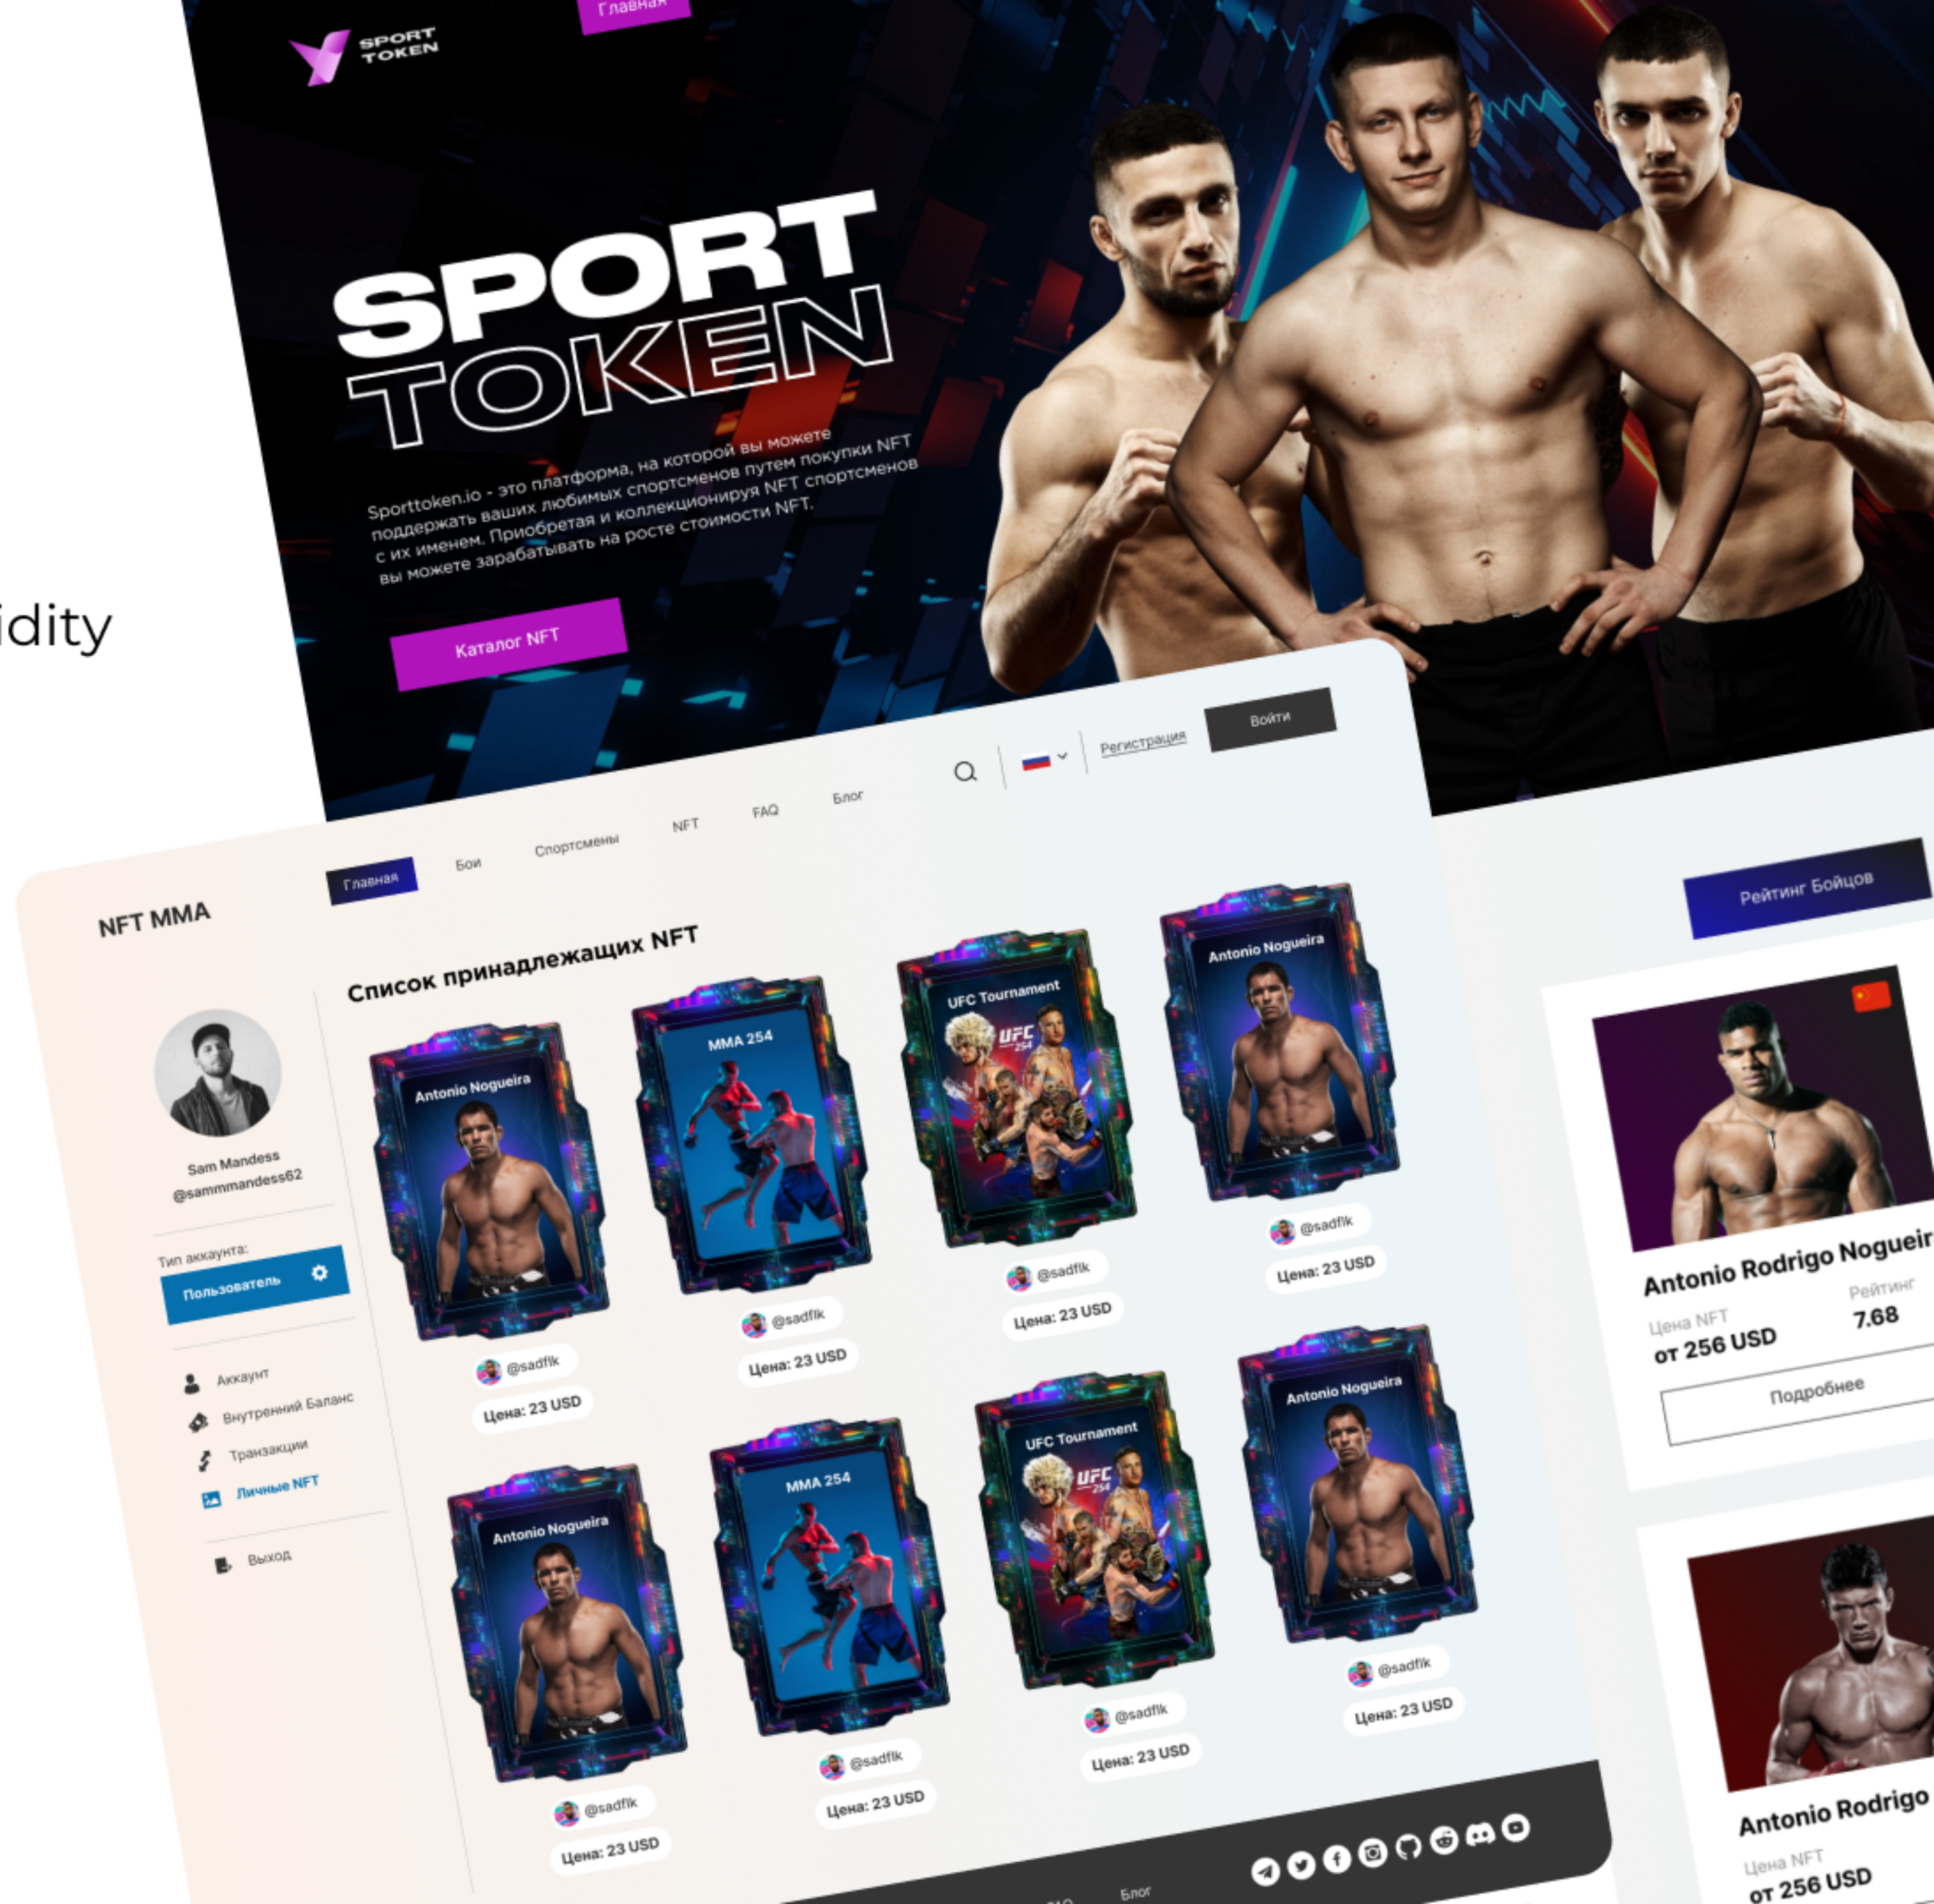

SportToken

3 months • Laravel, Vue.js, Polygon, Solidity

A catalog of athletes for issuing NFT collectible cards, statistics of fights, tournaments, fighters, an internal marketplace for NFT sale. Generation of NFT cards on the Polygon blockchain.

<https://sporttoken.io/>

CryptoDilla

3 months • Laravel, Vue.js

Aggregator of cryptocurrency exchanges for crypto traders, API integration with 4 exchanges. Trader profile, API key connection, trading terminal, statistics on cryptocurrencies and pairs.

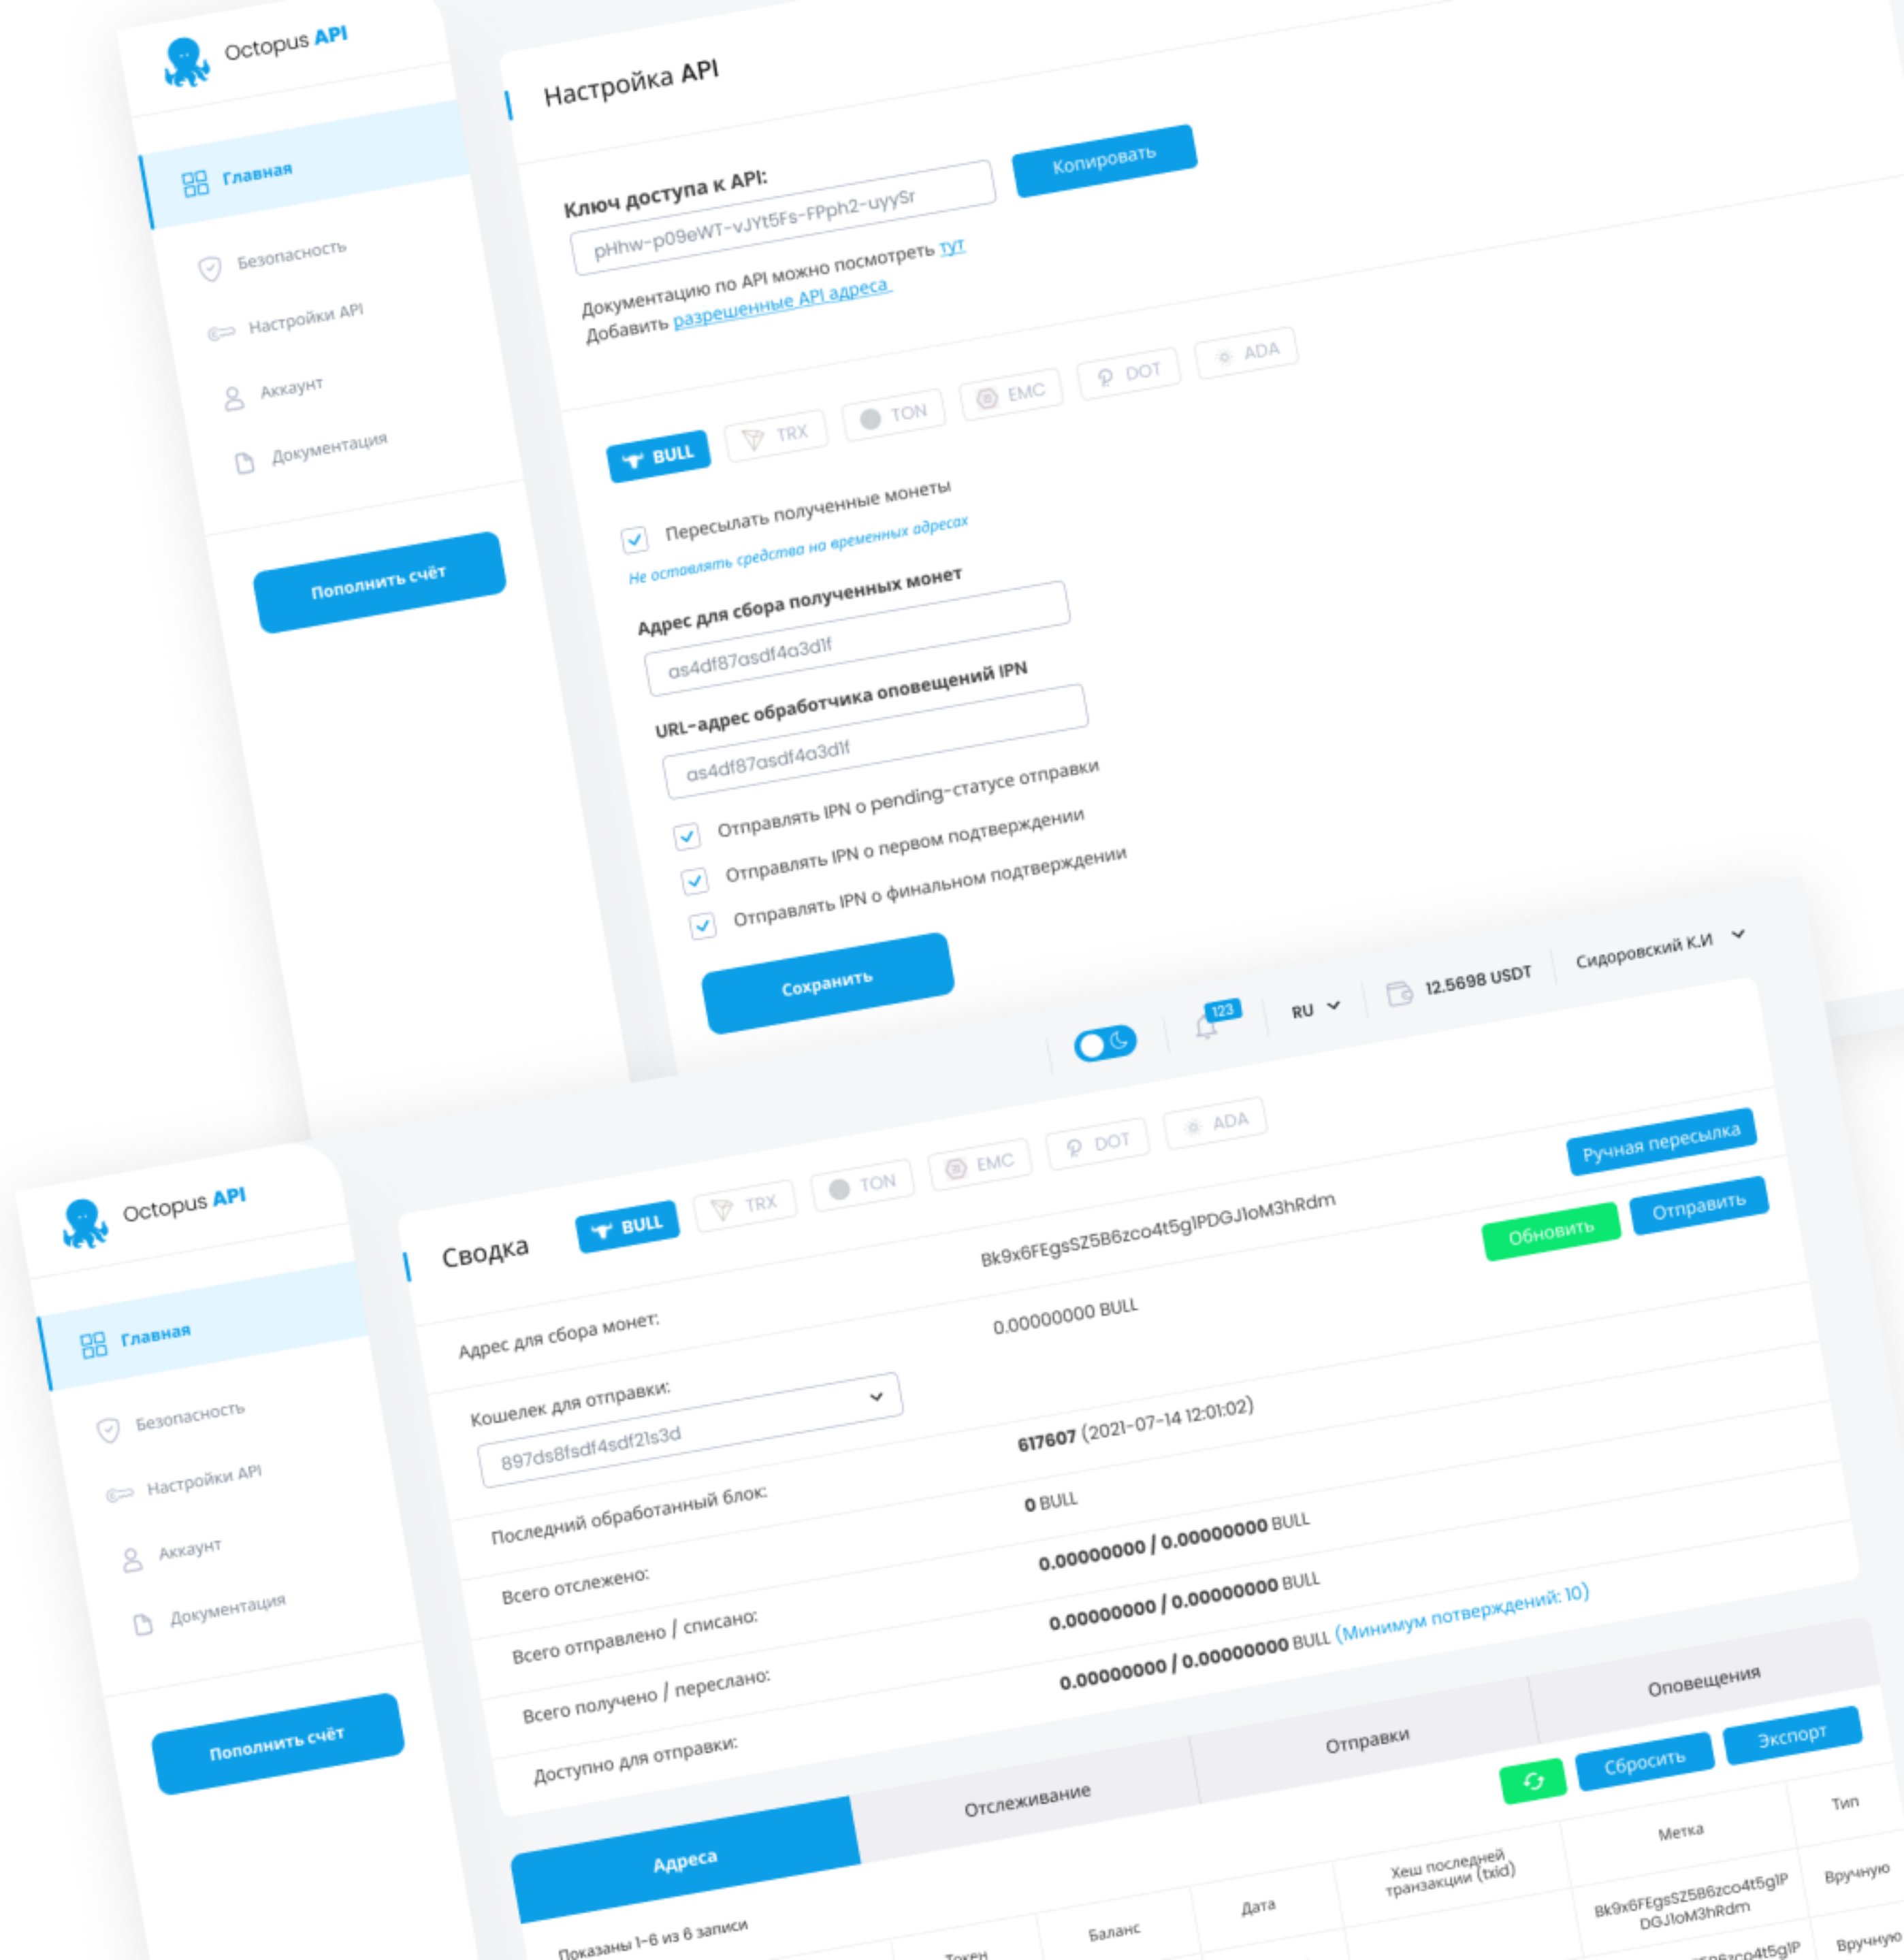

OctopusAPI

4 months • Yii2, JavaScript

A service for blockchain developers, an API for convenient access to the blockchain node features. The following blockchains are connected: Bitcoin, Ethereum, Tron, TON, DOT, ADA, EMC.

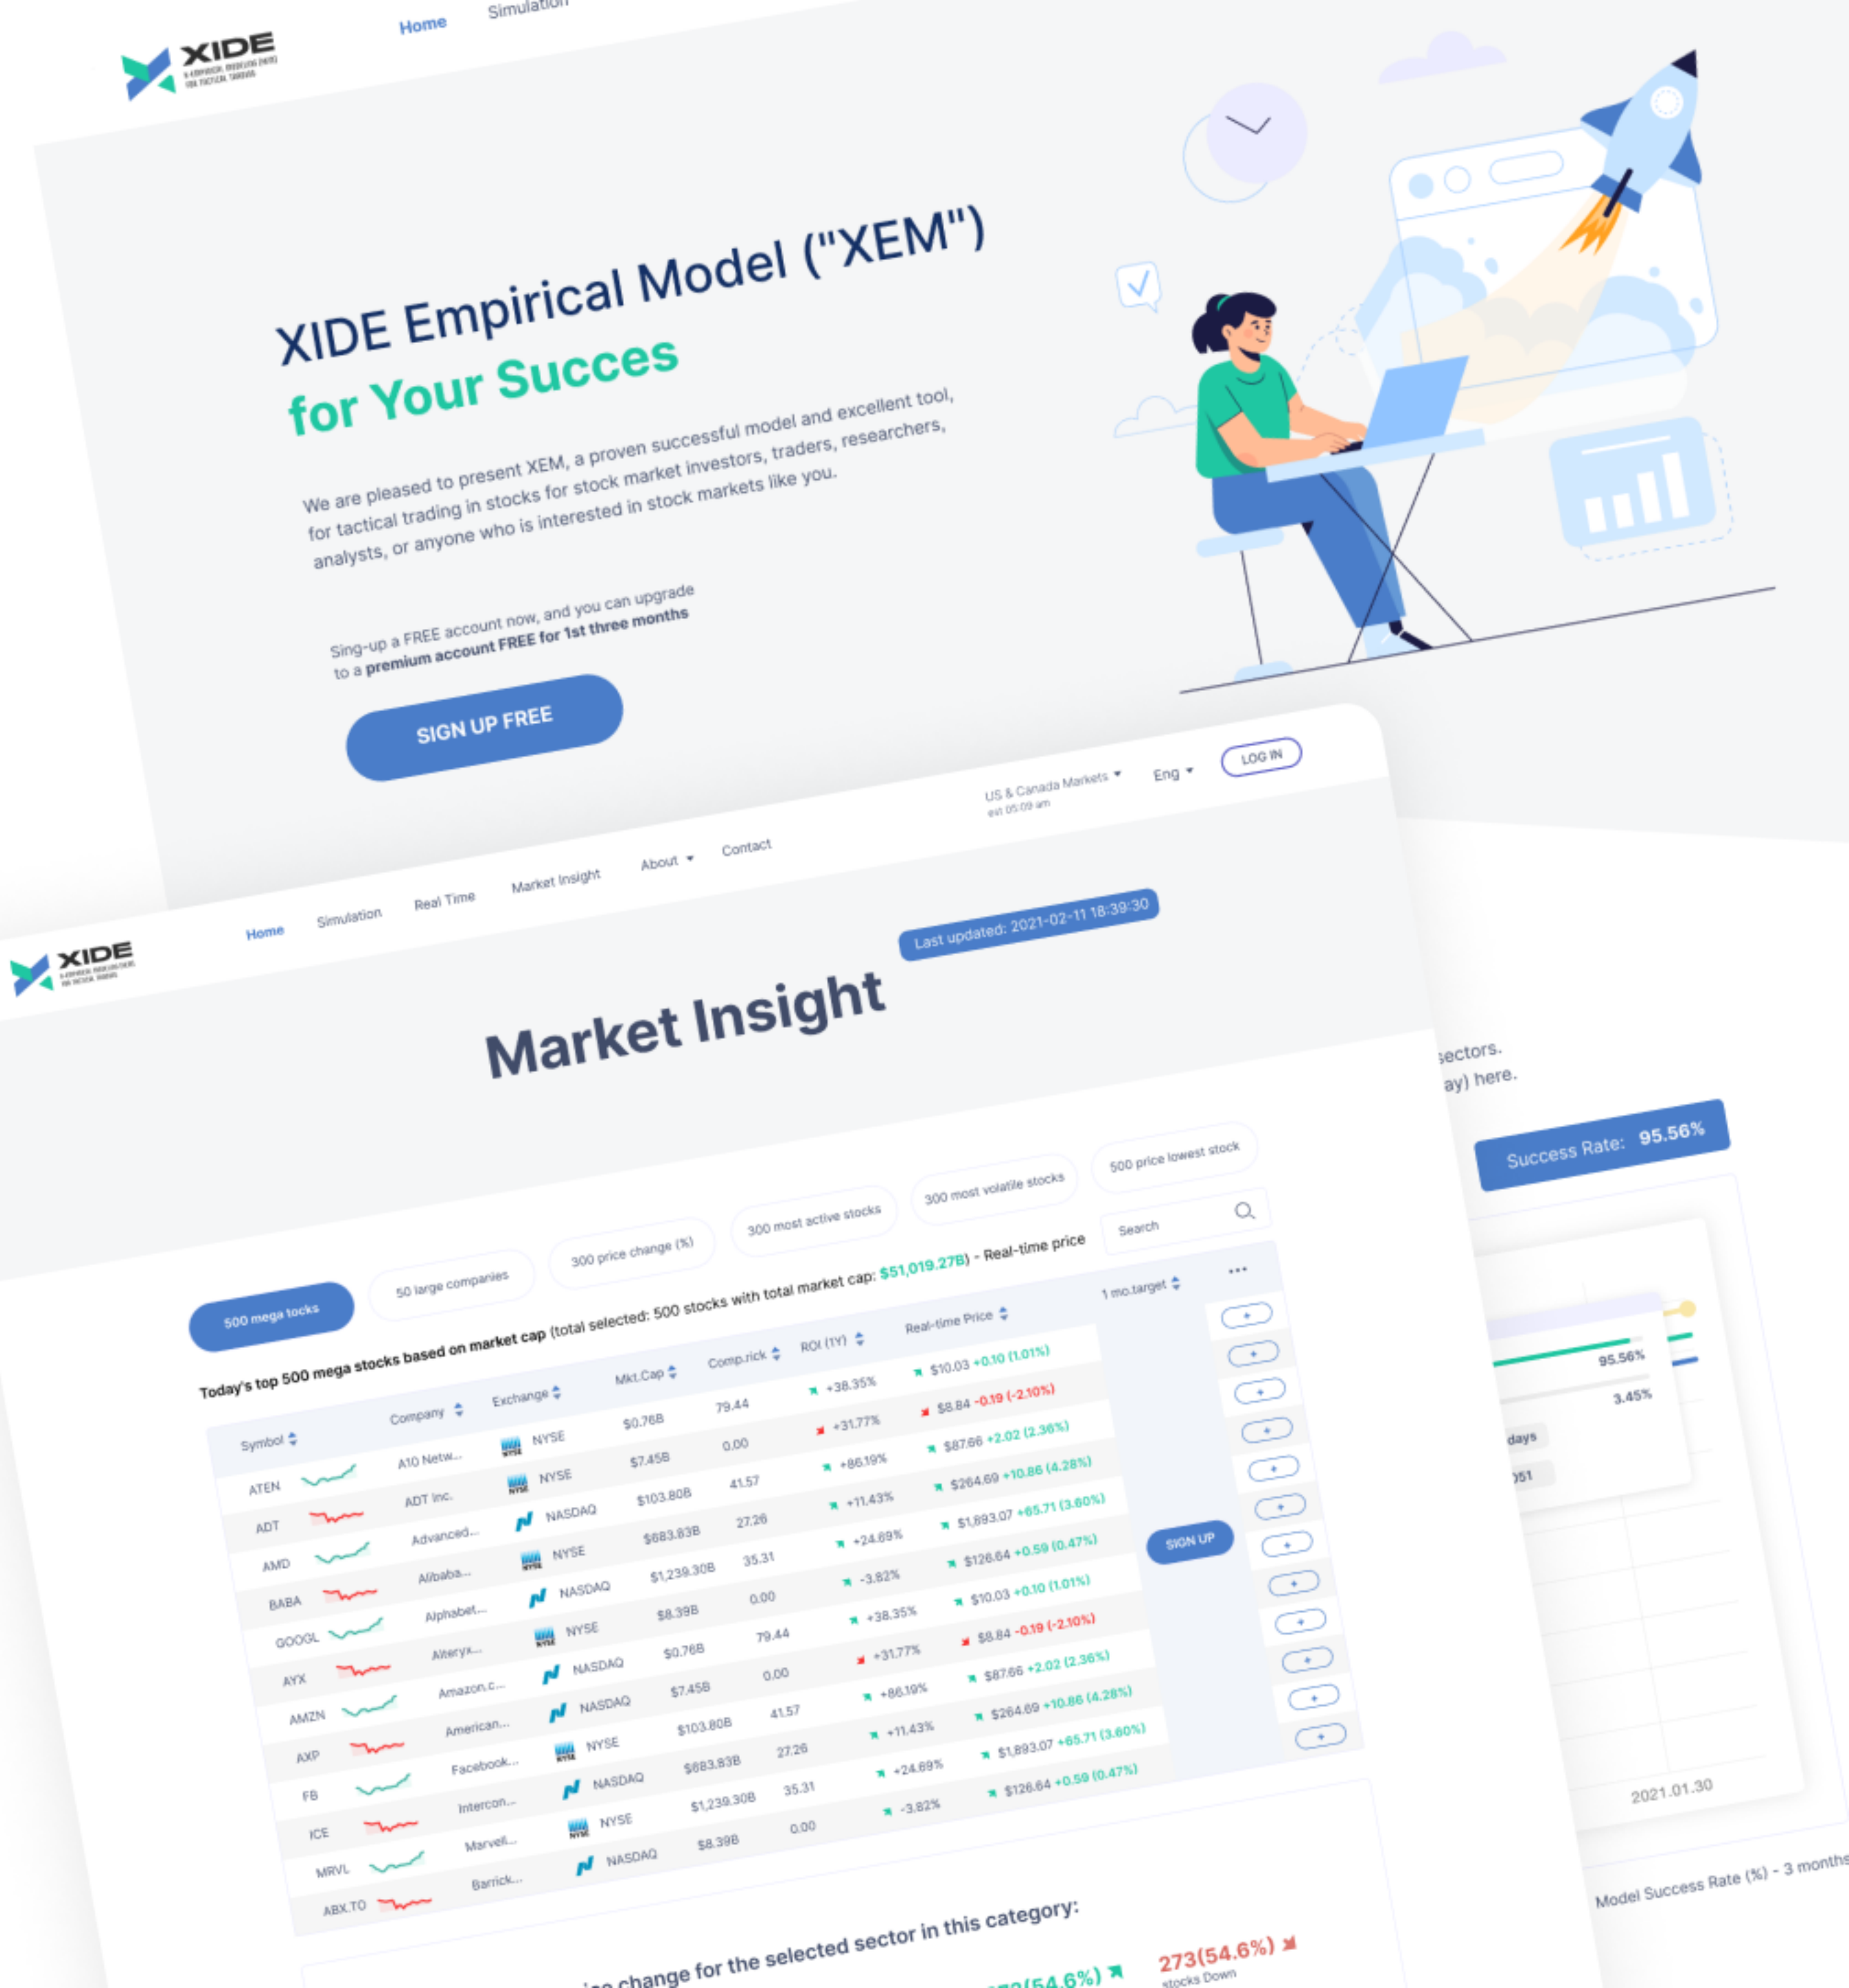

Xide

2 months • Laravel, Vue.js

Analytical service for traders on stock exchanges. Charts, stock quotes, work on the customer's closed algorithms. Paid subscription to the advanced features of analytical tools.

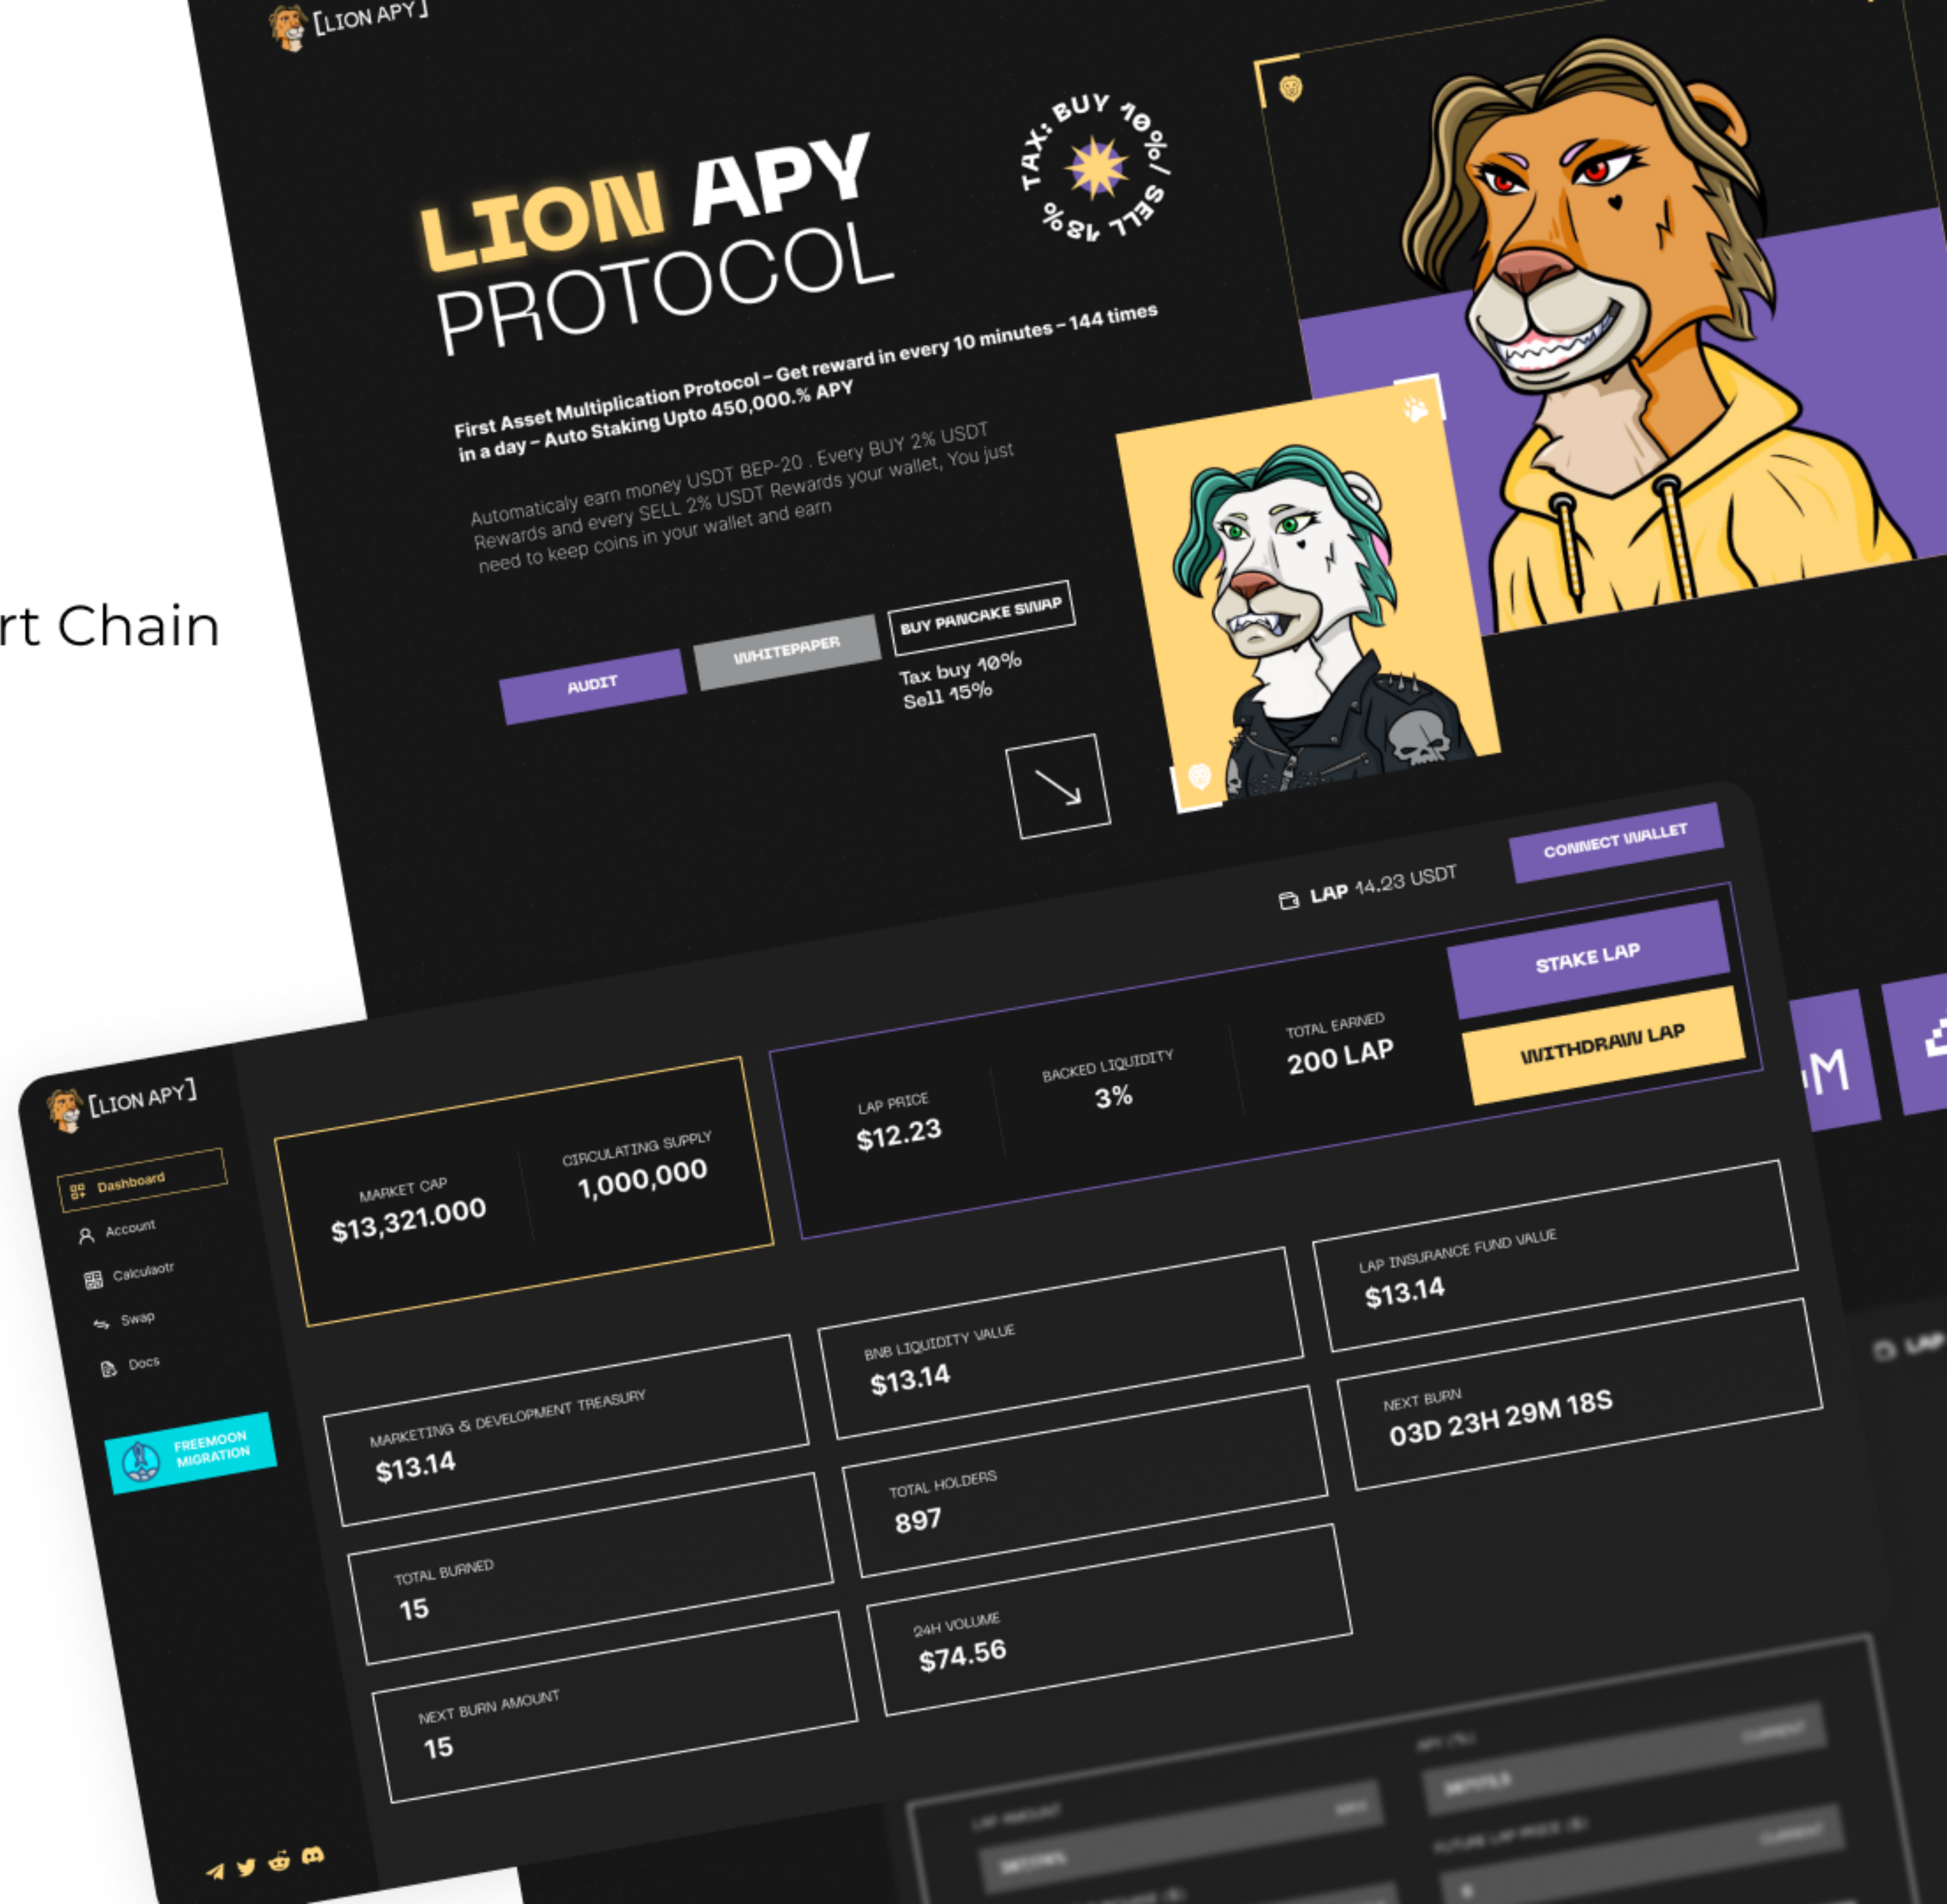

Lionapy

1 month • Vue.js, Solidity, Binance Smart Chain

Design and Front-End of the NFT collection + staking functionality and a DeFi platform for migrating one token to another. Calculator and statistics on profitability, connection of Metamask and TrustWallet.

<https://lionapy.com/>

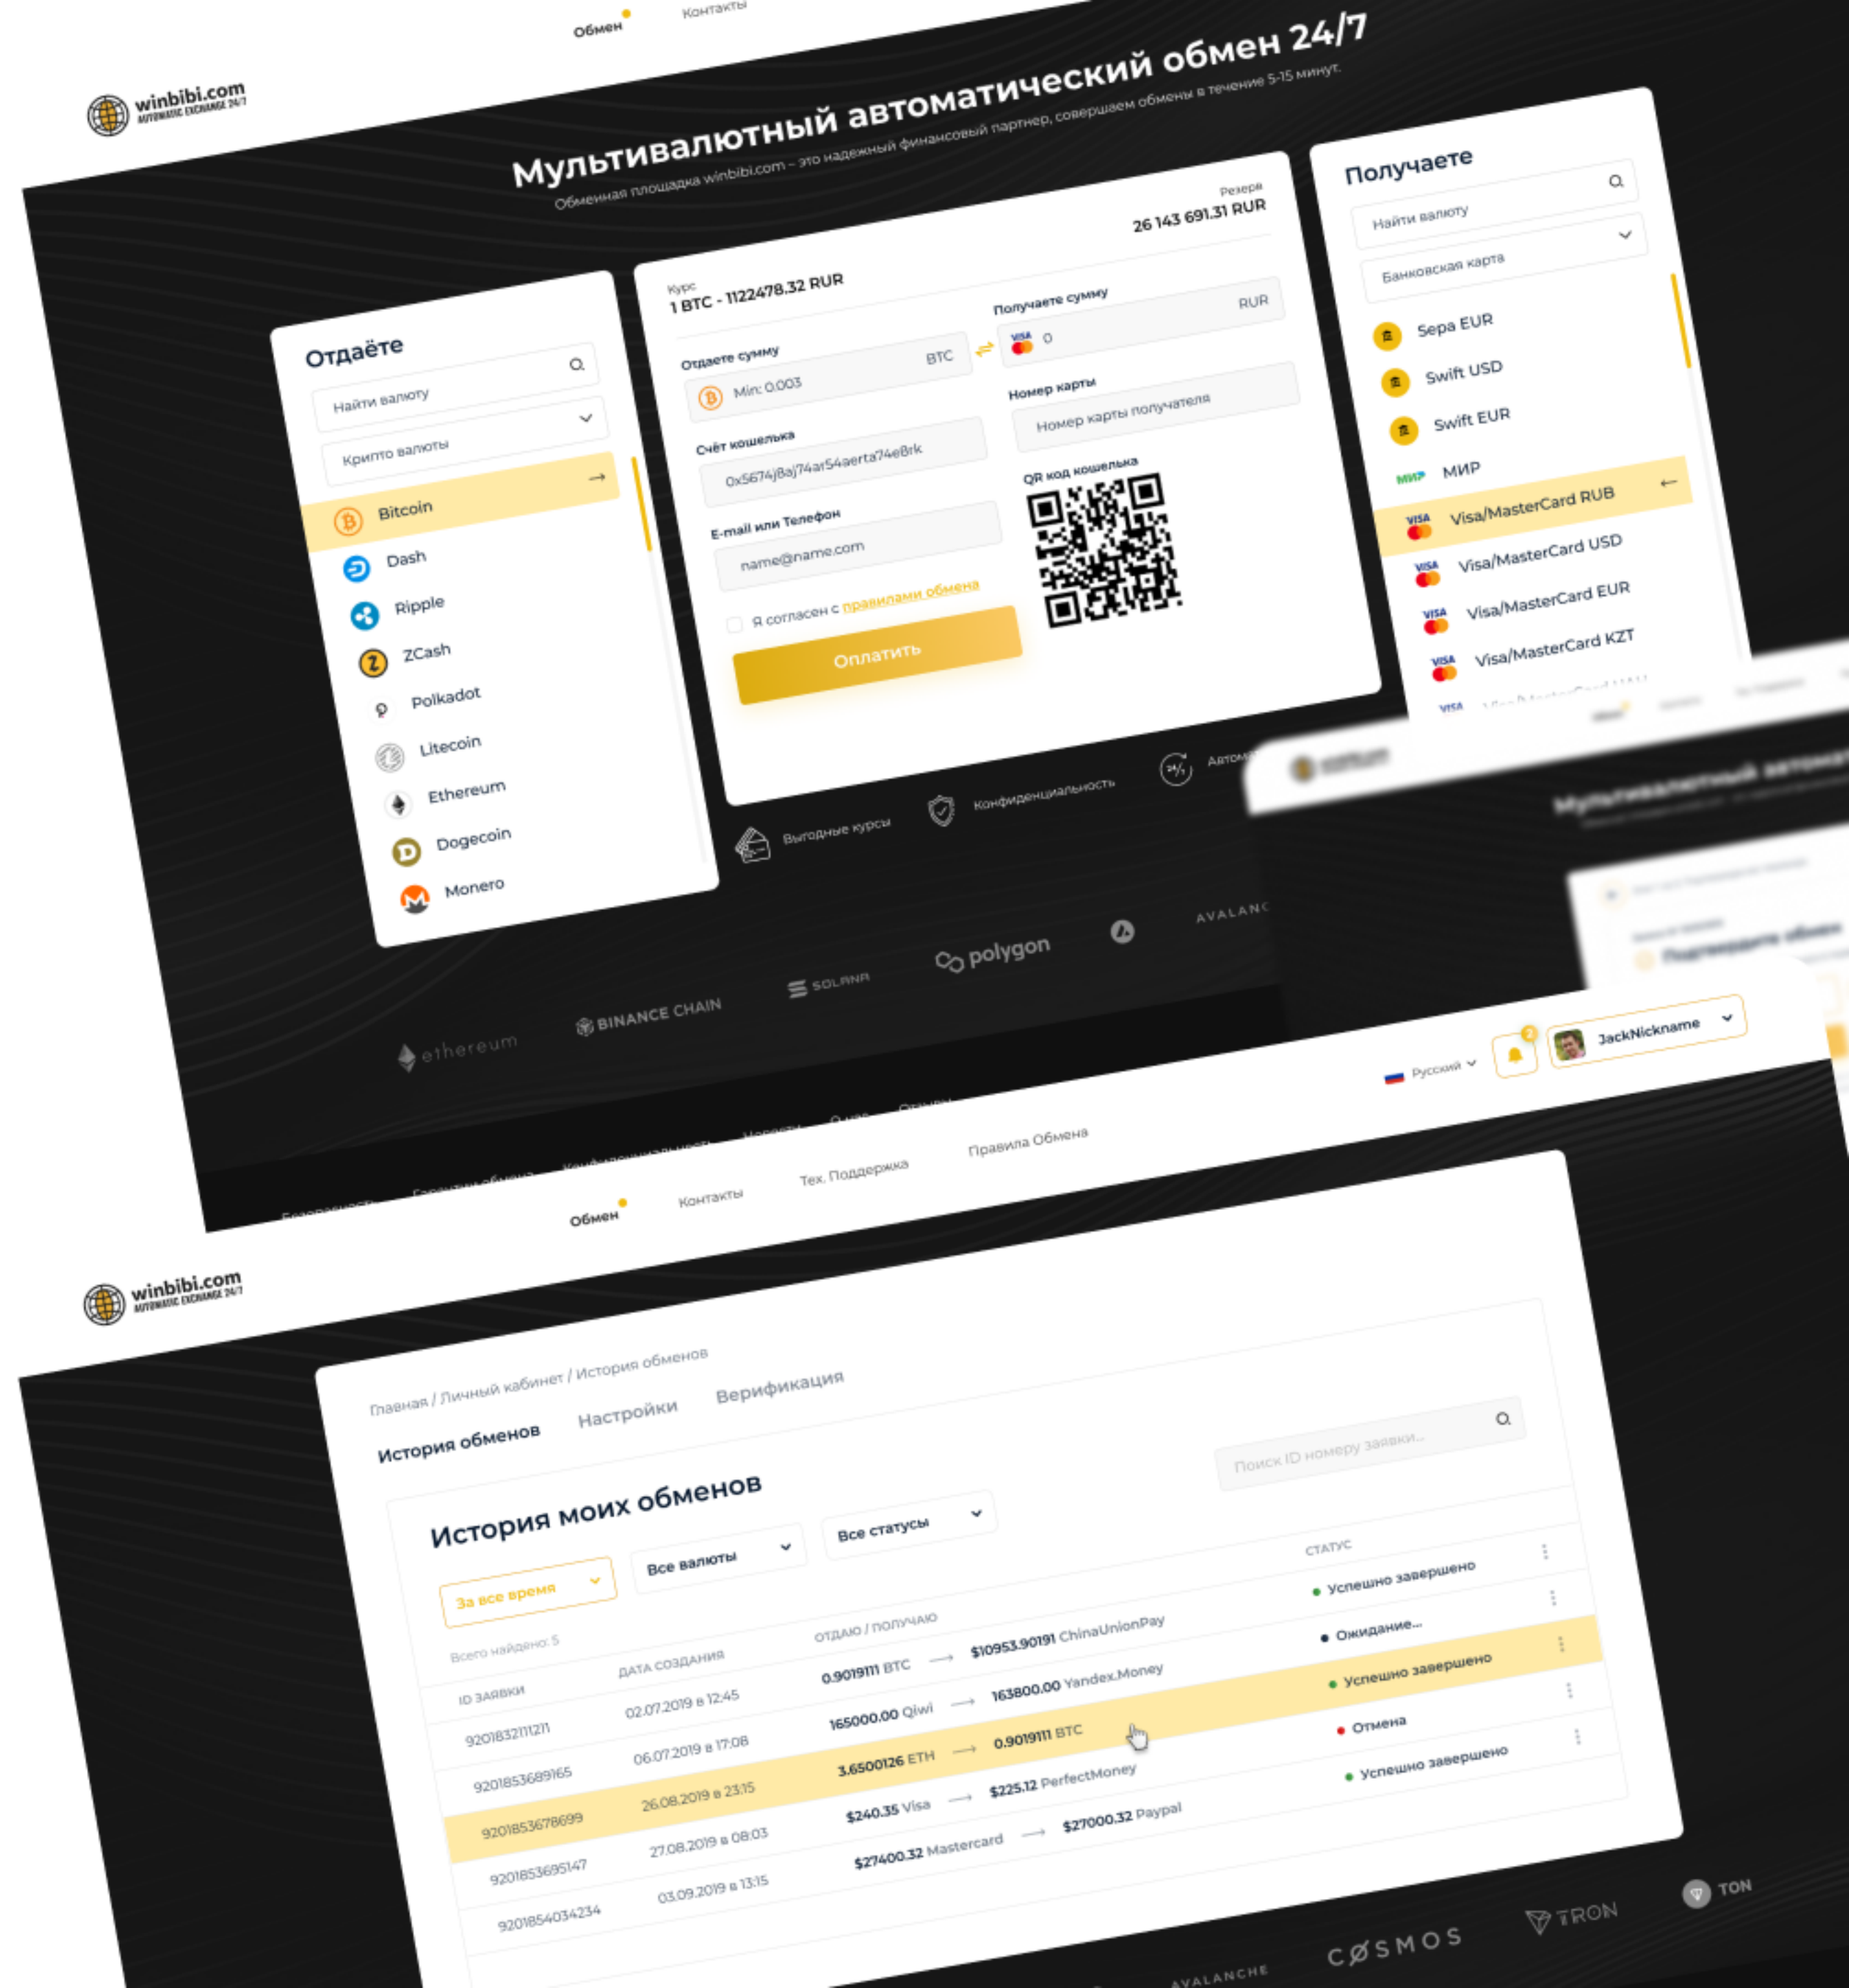

WinBiBi

2 months • Node.JS, JavaScript, PHP, Laravel

Cryptocurrency exchanger with automatic and semi-automatic transactions. Support for three blockchains: Bitcoin, Ethereum, Tron. Works with payment systems and cards Visa, MasterCard, Unionpay. Multilingual, referral program, KYC account verification.

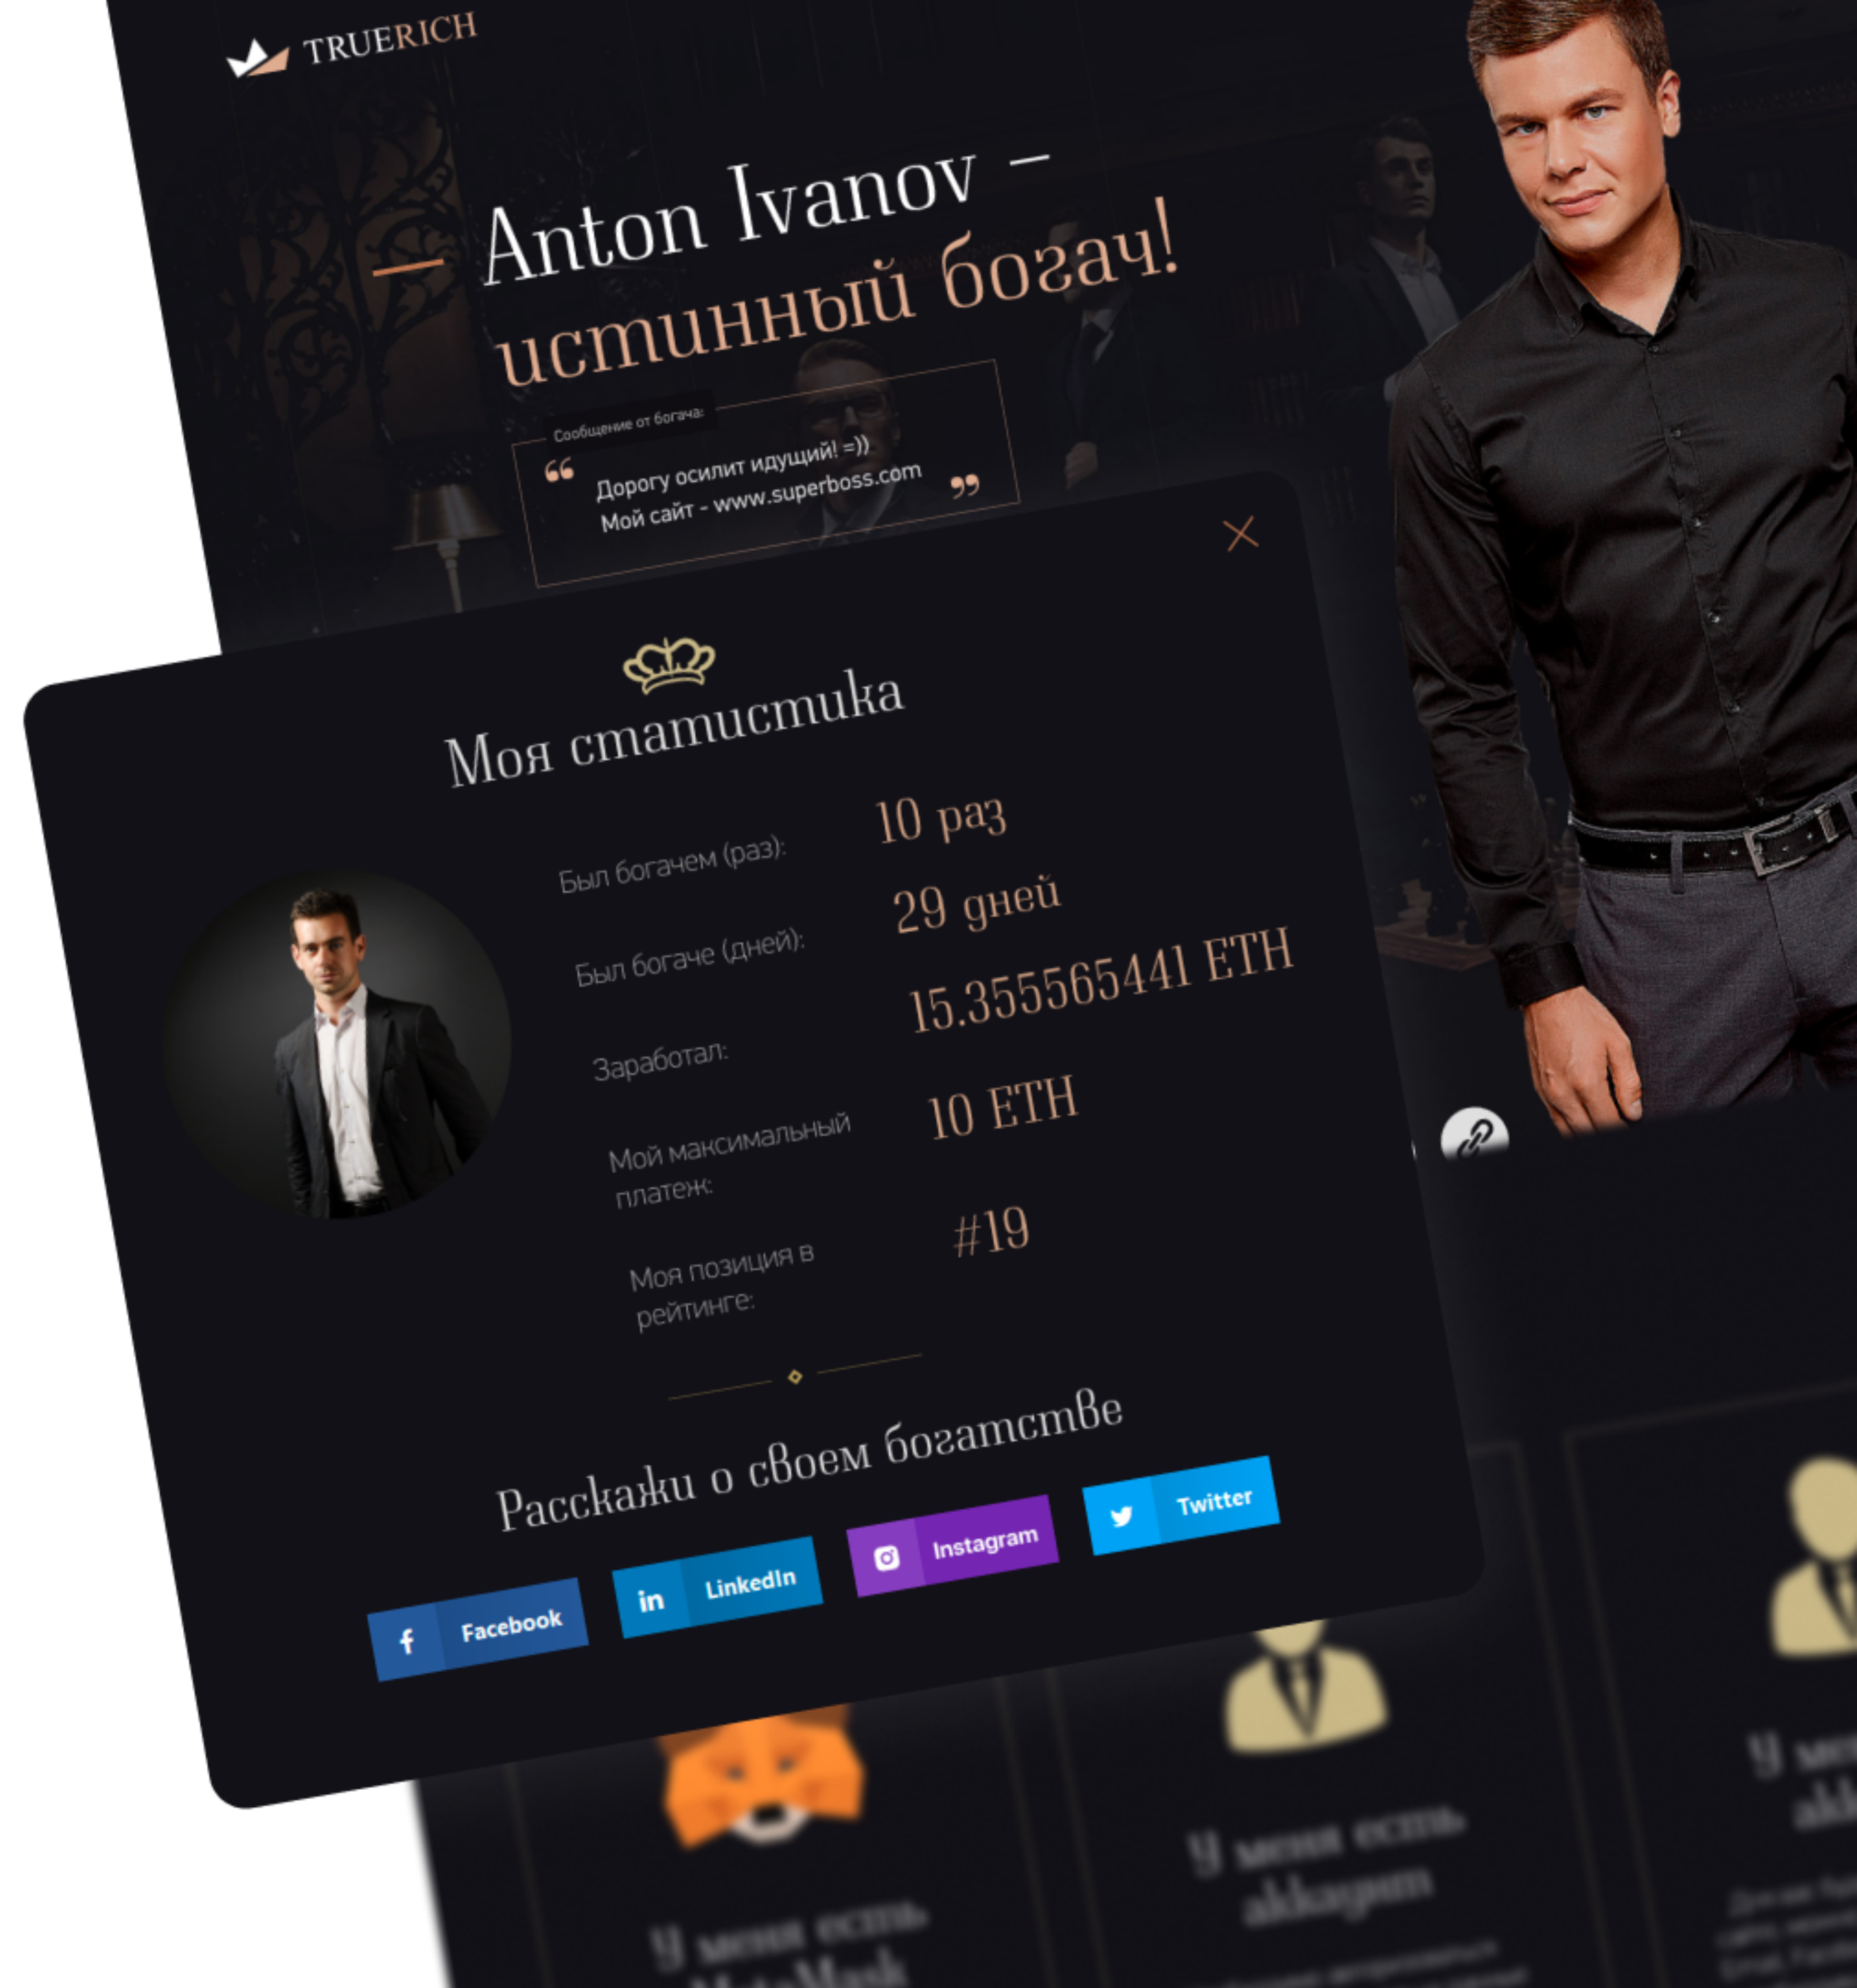

TrueRich

2 months • Vue.js, Laravel, Ethereum

A blockchain game built on the Ethereum smart contract based on the model "who made the most bet is the richest and most popular, the last one loses, the rest players take their bets and even more". A smart contract, user profile, ratings and connection via MetaMask have been developed.
